FORWARD

Welcome to the heart of our passion - a journey six years in the making and the culmination of over two decades of storytelling. This is our love letter to tabletop role-playing games (TTRPGs): the game we've always yearned to see on my bookshelf and the stories we've longed to tell.

In this Quickstart Guide, we invite you to step into a new universe, a cosmos brimming with endless possibilities, and experience a revolutionary way to tell your stories. This guide is a glimpse into what Metanthropes has to offer. Inside, you'll find the premise of the game and the basic rules, designed to get you hooked on the journey ahead. Please note that this Quickstart does not include the game's content, such as the vast library of Metapowers and other rich mechanics.

For those eager to dive deeper, visit [Metanthropes.com](https://metanthropes.com), where you can find instant access to the complete rule-set and explore the full content of the game. Our website also features tools to connect with the community, including private clubs, calendars, forums, and more to help you find players and schedule your sessions effortlessly.

If you prefer playing digitally, Metanthropes is fully compatible with the Foundry Virtual Tabletop (FVTT) platform. You can download the free demo system and explore our Premium Modules available both on our website store and the Foundry Marketplace.

Your support means everything to us.

Welcome to the world of tabletop roleplaying Games (TTRPGs), where interactive, story-driven adventures come to life. In a TTRPG, the Players aren't just passive observers. Instead, they become the Protagonists of an evolving story, shaped by their actions and decisions - a story orchestrated by one among them, called the Narrator. The Narrator sets the mood and tone with their descriptions, and the roleplay of all supportive characters. The Narrator and the Players collaborate, crafting a tale that springs from the collective imagination of everyone involved. Unlike traditional games, there are no winners or losers in a TTRPG. The goal is for the Group (both Players and Narrator) to immerse themselves in a world they have created; a world that while bound by certain rules, encourages unrestricted imaginative play.

Think of the dynamic of a group playing Metanthropes like this: the Narrator is the screenwriter, the director, and the entire supporting cast of a series. The Players become the Protagonists: the stars of the show. But there are no scripted lines or directions for them. They are free to do whatever they want, and the Narrator adapts the story based on their actions. The Narrator sets the scene, describing the environment, the mood, the setting, and the Non-Protagonist Characters involved. Then, it's up to the Players to drive the story forward. They interact with other Characters, the environment, and the world around them. They are responsible for their Protagonist's inner thoughts and how they translate into dialogue and actions. The Narrator controls the dialogue and actions of all NPCs, including the Antagonists (NPCs who antagonize the Protagonists).

PRONOUN USAGE

In Metanthropes, we embrace inclusivity and respect for all individuals, regardless of gender. To ensure a welcoming and inclusive environment, the pronouns used for Narrators, Players, Characters, and Protagonists are they/them.

ROLEPLAYING

Roleplaying in Metanthropes is the act of embodying the role of another Character, bringing them to life within your Group. There's no right or wrong way to do it. Each Group can develop its own style of roleplaying, tailored to their interests and preferred pace and intensity of the game. The game unfolds as Players and Narrators engage in collaborative storytelling, improvising on the spot to create a truly unique narrative. Each story is forged by the preferences of the Group, and the level of commitment and involvement is entirely up to each Player. Each Player should find the level of participation and preparation that triggers their enthusiasm and excitement the most and be vocal about it to their Group. Roleplay can range from an amusing form of entertainment to a transcendental, emotional journey of self-discovery. Let your imagination take over and be inspired to act out scenes, adding greater depth and meaning to the storyline.

Transitioning into your Protagonist is an important process that helps the entire Group stay "in-Character." Once the flow of roleplay begins, Players are advised to jot down any non-urgent, out-of-game questions or notes, and save them for the next pause, to avoid disrupting the game flow. Players can ask in-game questions to the Narrator, such as what they see around them, or if their Protagonist has knowledge of the subject that is in question in-game. The Narrator should provide all necessary information and then resume the Narration.

NARRATION

The Narrator's role within the Group is multifaceted and distinct from that of the Players. While Players create and roleplay a single Character, the Narrator breathes life into a multitude of NPCs, and the entire Cosmos. The Narrator also sets the pace of the Session and often acts as a referee or judge to resolve in-game or out-of-game disputes. The Narrator's primary focus should be on the story and the Players, they are tasked with ensuring that the spotlight is distributed equally among the Protagonists. Narrators should always build, develop, and deliver their stories without bias or favoritism towards the Players or their Protagonists. Each Player, in turn, must respect their fellow Players' moments in the spotlight.

It's crucial for all Players to understand that the dynamic between them and the Narrator is not competitive. Additionally, both Players and the Narrator must respect any topics or contexts that have been designated as off-limits by any member of the Group. Such no-go zones could be any topic or context that makes any member of the Group uncomfortable. Every Narrator brings something unique to the table. Some may excel in dramatic roleplay performances, while others shine in creating action-packed, tactical scenarios. Some may struggle with intricate plots but excel in improvisation. If you're a Player considering the role of the Narrator, remember that you'll only discover your unique talents by giving it a try.

METANTHROPES

At the heart of each story are the Metanthrope Protagonists. The very essence of the word Metanthrope originates from the Greek term "Μετάνθρωπος" which translates to beyond human. These remarkable beings embody the dichotomy between humanity and something more. What sets them apart from ordinary humans are their Metapowers - unique, metaphysical gifts that transform them into something extraordinary. Yet, even with their newfound abilities, Metanthropes remain tethered to the frailties, passions, and flaws of their human nature.

In a Session of Metanthropes, Players will embody the transformative journey of an ordinary human who becomes a being of limitless capabilities. The game poses the question: What would you do with such incredible power?

Anyone, anywhere in the world, regardless of their age, gender, or background, has the potential to become a Metanthrope. All Metanthropes possess an innate ability to learn new skills and knowledge at an extraordinary pace, while their physiology undergoes remarkable transformations. Elderly Metanthropes are rejuvenated, granted a breath of youth that defies the passing of time. On the other hand, younger Metanthropes mature at an accelerated rate, acquiring wisdom beyond their years.

Unlike other supernatural beings of other works of fiction, Metanthropes are not limited by any external source, such as an energy pool, magic, mana, spell slots, or their own vitae. Instead, their only limits are bound by their imagination, their psychosynthesis and the possibility of some Metapowers backfiring. This grants them the freedom to use their powers as many times as they see fit, with no arbitrary constraints. Metanthropes can harness their Metapowers until they have accomplished their goals and fulfilled their deepest desires.

METAPOWERS

Once ordinary individuals like you and me, Metanthropes undergo a profound transformation, known as the Metamorphosis, which bestows upon them metaphysical abilities called Metapowers. This Metamorphosis can occur at birth, or at any point during their human lives. The manifestation of Metapowers can be triggered by a variety of factors, ranging from encoded genetic traits that activate at a certain age, to establishing a psychic connection with beings from other Dimensions, or uncovering the secrets hidden within the depths of the ocean.

Metapowers, in their remarkable diversity, emerge without bias, often bestowed upon individuals with antithetical personality traits and abilities. It is not uncommon to witness an elderly person harnessing the strength to effortlessly lift a car, or a once cowardly individual developing an indomitable will. Social outcasts find themselves transformed into inspiring leaders, while those of high-status risk tarnishing their public image through the misuse of their newfound powers.

These powers defy the laws of reality, allowing for the control of gravity, telepathic communication, miraculously curing all wounds, creating duplicates of yourself, among other magnificent abilities. As a Metanthrope, your journey will be characterized by exploration, discovery, and the continual unlocking of the extraordinary within.

PROTAGONIST

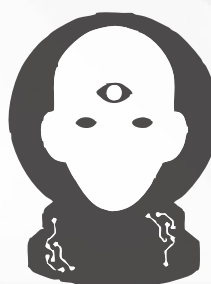

The term Protagonist refers to the Metanthropes that Players embody during a story. Unlike other Metanthropes, Protagonists are the driving force of the narrative, capable of shaping the flow of one or even multiple Timelines with their decisions and actions, even at the earliest stages of their journey. This special role grants them the unique ability to forge their own destiny within a vast and unpredictable cosmos. With fate as their ally, Protagonists can bend the will of the Multiverse to align with their aspirations, escape the grip of death, and overcome insurmountable odds. While a Player may take on multiple Protagonists during a story, their Destiny is tied to them as Players, transcending individual characters. In the world of Metanthropes, certain Metapowers can reveal the Protagonists among the multitudes, and others even possess the extraordinary ability to break the fourth wall, blurring the lines between their universe and ours.

SOCIETY

The formation of a Metanthrope society weaves together the complexities of their shared world. The ebb and flow of Metanthropes, their presence known or hidden from humanity, the advancement of technology, and myriad other factors intertwine to shape the bonds and social dynamics among them. Some Metanthropes have never encountered another of their kind, while others remain unaware of their own innate Metapowers. Fear of exposure may drive some Metanthropes to avoid any suspicious interactions, concealing their secret abilities from the world. However, there are also those who actively seek to connect with fellow Metanthropes, yearning for the bonds of community. Together, they aspire to unite their gifts and ideas, exerting influence and driving change on both societal and individual levels.

COALITIONS

Within the world of Metanthropes, the power of unity is realized through the formation of Coalitions. A Coalition is a group of Metanthropes who work together, synergizing their Metapowers and ideas to become a force to be reckoned with. While individual Metanthropes can accomplish remarkable feats, the true potential of their abilities is magnified within the collective might of a Coalition. The Players within a Group playing this game usually play the Metanthropes who are members of a Coalition.

Coalitions can form through various means, be it chance encounters, childhood friendships, the demands of survival, diplomatic maneuvering, the pursuit of overwhelming power, or the short-lived collaborations driven by a common goal. The destiny of Coalition members may be bound by the machinations of an enigmatic and all-powerful entity, whose motivations remain forever elusive. By joining forces, a Coalition enhances the individual capabilities of each Metanthrope, compensates for weaknesses, opens new avenues for problem-solving, and unlocks hidden potential.

THEMES

Themes in Metanthropes can be as diverse as the imagination of the Group, allowing for a fluid and adaptable storytelling experience. There are four recurring themes that tend to emerge during a Metanthropes story, shaping the narrative and driving Character development.

METAMORPHOSIS

The transformation from an ordinary human into an extraordinary being is a central theme in Metanthropes. Each Metanthrope experiences their Metamorphosis differently, ranging from traumatic or life-altering events to awe-inspiring moments of self-discovery. This “coming of age” theme explores the impact of this pivotal transformation on their identity, beliefs, and path in life, shaping the very essence of their existence.

As Metanthropes grapple with the aftermath of their Metamorphosis, they face a journey of self-discovery and self-acceptance. This theme explores their personal growth, as they learn to harness their newfound powers, confront their fears and limitations, and find their place in a world that may view them as both saviors and threats. The Metamorphosis is not just a physical transformation; it is a profound exploration of identity, inner strength, and the potential for both greatness and fallibility.

METANTHROPES & THE WORLD

This theme delves into the complex relationships between Metanthropes and the world around them. It explores the implications of revealing their existence to humanity and the subsequent conflicts that may arise. Metanthropes have the power to influence and shape their environment, raising questions about the balance between coexistence with humans and the potential consequences of their actions. Will their interactions with humans, nature, and animals lead to harmony or chaos?

Beyond the conflicts and implications of revealing their existence, this theme delves into the ethical dilemmas that Metanthropes face. Metanthropes must wrestle with the consequences of their actions and the potential impact on the delicate balance of Metapowers, nature, and civilization. It is a theme that explores the price of power,

the nature of morality, and the complex interplay between individual agency and collective welfare.

A METAPOWERCED COMMUNITY

The interactions within Metanthrope society form another recurring theme. The composition and locations of Metanthrope Coalitions on the planet, and Factions across the Multiverse, create opportunities for collaboration, cooperation, or conflict. Stories may revolve around the personal connections of a small group of Metanthropes or explore larger Metanthrope civilizations with established governments, ideologies, and histories. The theme of Metanthrope society delves into questions of unity, dissonance, power dynamics, and the implications of Metapowers on the social fabric.

Within Metanthrope society, there are struggles for power, ideological clashes, and tensions arising from diverse perspectives. This theme delves into the intricacies of Metanthrope relationships, highlighting the alliances, rivalries, and personal dramas that unfold within their ranks. Metanthropes must navigate the complexities of trust, betrayal, and loyalty as they face internal conflicts that mirror the external challenges they encounter. It is a theme that explores the dynamics of community, the quest for identity and belonging, and the ever-shifting balance between unity and individuality.

WHAT ELSE IS OUT THERE?

Metanthropes are not the only Metapowered entities out there. This theme explores the interactions between Metanthropes and other Metapowered beings, such as extradimensional Spirits, extraterrestrial entities, and other otherworldly Metapowered forces. Encounters with these NPCs can shape the narrative, introducing unique challenges, alliances, and cosmic mysteries. Stories may unfold within the confines of a single city on Earth or explore the rich intergalactic histories of alien civilizations.

The interactions between Metanthropes and other Metapowered beings give rise to far-reaching consequences. This theme explores the profound encounters with ancient entities and civilizations existing beyond the bounds of human comprehension. Metanthropes venture into uncharted territories, where the boundaries of reality blur and the fabric of existence bends. It is a theme that delves into existential questions, metaphysical explorations, and the pursuit of knowledge and understanding in the face of the unfathomable.

SETTING

The genre of Metanthropes is a setting-flexible tapestry, an open canvas shaped by the collective imagination of the Group. While its foundation may lean towards science fiction and superpowers, Metanthropes embrace themes ranging from real-world physics and scientific phenomena, and how they are translated to extraordinary abilities instead of relying to purely fantastical elements. Metanthropes can accommodate a spectrum of genres: modern urban Metapowered warfare, cyberpunk odysseys into digital Dimensions, existential post-apocalyptic dramas, and even light-hearted escapades on alien planets, to name a few. These seemingly disparate storylines can intertwine, merging different universes into one cohesive narrative. The flexibility of Metanthropes allows Narrators to weave stories that reflect the unique preferences of the Group, whether they aspire to embody classic superhero tales or engage in philosophical debates with cosmic entities. The Metapowers chosen by Players further shape the Saga, influencing its tone and style; mind-controlling abilities may inspire political intrigue, while destructive powers fuel high-stakes action. The setting and genre evolve alongside the Group's imagination, inviting innovation and the creation of stories that transcend traditional boundaries.

The cosmology of Metanthropes is adaptable, providing a framework of key, overarching elements that shape the mythology of this expansive universe while leaving room for each Group's unique narrative vision. These foundational concepts provide Narrators with a vibrant canvas to craft immersive worlds, whether their tales are confined to the intimate scale of a single neighborhood, the bustling life of a sprawling metropolis, or the uncharted expanses of a supercluster of galaxies. Stories may leap across the stars to explore countless worlds scattered across the cosmos or dive into the intricate landscapes of alternate Dimensions. The antagonistic forces Protagonists face are equally diverse, ranging from human adversaries and rival Metanthropes to extraterrestrial beings, extradimensional entities, synthetic lifeforms, or Metatherions: massive monstrous creatures imbued with Metapowers. This central cosmology invites Narrators to strike a balance between established lore and boundless creativity.

DIMENSIONS

Dimensions in Metanthropes are diverse and expansive landscapes that Characters can explore, either physically or through the projection of their consciousness. Each universe consists of various Dimensions, each governed by unique laws of physics, or existing at a different point in time. While the Material Dimension, the realm of organic and synthetic lifeforms, celestial bodies, and familiar time flow - serves as the foundation of existence, it is far from the only one. Other Dimensions, accessible through secret Dimensional gates or through the use of Metapowers, host a variety of native entities known as Extradimensional beings.

These beings, eternal souls tied to their home Dimensions, range from Spirits with minor abilities to powerful Animas capable of rivaling many Metanthropes. At the pinnacle of power are Incarnations, entities embodying specific aspects of their Dimensions, wielding immense strength, wisdom, and mastery over their native realms. Extradimensional entities do not form centralized societies but exist independently within their own realms. Some are well known and accessible to the Metanthrope community, while others remain shrouded in mystery, waiting for daring Cosmonauts to uncover their secrets. The Dimensions presented here are just a glimpse of possibilities and wonders that can be found out there, urging new Narrators to create their own, and their Players to be the first to discover them.

AETHER

The Aether Dimension is a temporal realm that exists in the future of the current Timeline of the Material Dimension. Within the Aether lies an ocean of unrealized possibilities and forthcoming wonders. It is a realm where unborn souls wander, where structures and marvels yet to be constructed can be found, and where ideas and concepts not yet conceived take shape. The Aether Dimension is composed of ever-multiplying layers, each representing a specific temporal point. Some layers offer glimpses into the near future, while the higher layers project millennia ahead. The layers continue to expand as time flows, except for the final layer, representing the last moments of the entire Timeline. Many Metanthropes visit the Aether to draw inspiration from the shape of things to come, to prepare for the transformative shifts that will reshape their environment and challenge common notions. Some perceive it as a heavenly realm where harm cannot befall them, while others remain cautious of the seductive dangers that arise from clinging to the future for too long.

ASTRAL

The Astral Dimension is a boundless realm of the mind, existing parallel to the current Timeline of the Material Dimension. Within the Astral, the fabric of reality is shaped by imagination, dreams, and subliminal thoughts, giving form to the intangible, and turning ideas into tangible manifestations. It is a realm where limitless possibilities abound, limited only by the collective imagination of all beings. Daring cosmonauts have traversed the abyss of nothingness, their astral forms crossing into new landscapes of consciousness, venturing far beyond the planetary confines of Earth. The Astral Dimension beckons those who seek scrying upon the dreams of others and delve into the depths of the subconscious, while others regard it as a sacred gateway to other Dimensions and Timelines. Here, legends and deities born of human imagination come to life, alongside enigmatic beings native to the realm of dreams.

NETHER

The Nether Dimension is a temporal realm that exists in the past of the current Timeline of the Material Dimension. Within the Nether, echoes of forgotten ages resonate, and remnants of the past linger. It is a realm where the forgotten find their resting place - from the souls of

the departed to the ruins of once-majestic structures, from ravaged lands to tales and ideas lost in the annals of time. The Nether Dimension consists of a finite, yet extensive, number of layers, each representing a specific temporal point. Some layers offer glimpses into recent history, while the deeper layers take one on a journey through ancient civilizations and primordial eras. At the heart of the Nether lies the deepest layer, the origin of the Timeline itself, the cosmic event that birthed life in the universe - the big bang. Metanthropes venture into the Nether to unravel the mysteries of the past, to learn from history, and to uncover lost lore. Some perceive it as a somber and desolate realm, steeped in regret and despair, while others find solace in the revelations that come from exploring the depths of their Timeline's history.

Other intrepid Cosmonauts speak of thousands of pocket Dimensions nestled within Astral, a Digital Dimension where information reigns supreme, an inhospitable Dimension teeming with raw elements, and a Quantum Dimension that contains the database of all Timelines. There are even Dimensions that exist outside the bounds of space and time, acting as interconnectors of all Timelines, expanding the grand cosmology of the world of Metanthropes.

OUTER SPACE

While some Sagas may remain grounded within a single city, exploring the intricate web of human connections, the cosmos offers a vast, boundless stage for discovery, adventure, and conflict. Outer space becomes the ultimate frontier, where Metanthropes embark on interstellar journeys, traverse distant galaxies, and uncover alien worlds teeming with life and mystery. Through the extraordinary power of Metapowers, exoplanets once seen only from afar are now within reach. These worlds are as diverse as they are uncharted, from lush jungles alive with sentient flora and fauna to desolate wastelands bathed in toxic chemicals, and even planets orbiting Black Holes, governed by strange physical phenomena. Each planet holds wonders, challenges, and opportunities for Metapowers to be used in unexpected ways, sometimes reshaping the rules of engagement.

Amid these alien landscapes, Metanthropes encounter civilizations that span the spectrum of power and knowledge. Primitive societies may revere them as divine beings, while advanced alien races match their Metapowered and technological might. Ancient, enigmatic cultures, incorporeal energy beings, and colossal leviathans traversing the void add further layers of intrigue. Diplomacy, alliances, and conflict play out on this intergalactic stage, offering moments of growth and revelation for the Metanthropes as they unravel the vast complexities of the universe. Daring cosmonauts who explore, interact, and leave their mark among the stars begin to grasp the immense scope of existence.

TIMELINES

A Timeline represents the chronological flow of a single universe, from the monumental spark that ignited time and space to its ultimate conclusion. Within this continuum, matter forms and dissipates, organisms rise and fall, and celestial bodies traverse the vast expanse. Each Timeline contains its own array of Dimensions. Thus, in each Timeline there is a unique version of Nether, which includes that Timeline's history, a unique Astral which is composed of the dreams and emotions of its denizens, and a unique Aether, which includes various probabilities of how this Timeline's flow will commence.

Each story of Metanthropes unfolds within its own unique Timeline, an alternate version of our real-world history, shaped by the emergence of Metanthropes whose extraordinary abilities can redefine the course of events. Whether set in the Middle Ages, where the presence of Metanthropes accelerated technological and scientific advancements, or in recent decades, where they reshaped economies, influenced culture, and altered geopolitical landscapes. The mere presence of one Metanthrope is enough to transform the trajectory of the Timeline's history. The Narrator guides this alternate reality, determining the extent of their influence on pivotal events, while the Protagonists step forward as agents of change. Though a Timeline exists as an isolated bubble, there are moments when these bubbles intersect, intertwining disparate worlds and weaving a web of profound and unpredictable consequences. During a Session of Metanthropes, the Protagonists might explore multiple Timelines. Inter-Timeline travel is not an easy feat to accomplish, typically reserved for beings of extraordinary power. Tales of hidden gates within certain Dimensions, mystical artifacts, and wondering mysterious guides which allow inter-Timeline pathways fuel the curiosity of Metanthropes, enticing them to uncover secrets that lie beyond the boundaries of their own reality.

MULTIVERSE

The Multiverse is a vast and intricate web of interconnected realities, a grand tapestry woven from infinite threads. Each thread represents a unique Timeline, a distinct universe with its own events, beings, and possibilities. Diverging at key moments, these Timelines branch off into infinite paths, shaped by decisions and actions that ripple outward to create new realities. From the smallest, seemingly trivial choices to monumental, world-altering events, the Multiverse captures the boundless ways in which history can unfold. Within this immense expanse, echoes of similarity resonate across some Timelines, while others are radically different, shaped by unique circumstances. Parallel Earths may share familiar histories, but the galaxies beyond them often diverge in extraordinary ways. The fates of countless beings are intertwined within this cosmic web, their stories echoing across its threads. For Metanthropes, the Multiverse offers uncharted territories filled with challenges, triumphs, and entities imbued with Metapowers, inviting them to explore its limitless realities and unlock its endless potential.

THE SYM

Imagine a grand opera house towering above a busy street. Inside, the cosmic symphony unfolds, where some listen, some perform, and a rare few compose its eternal melodies.

Most passersby, those we call **Bystanders**, may glimpse its imposing exterior yet remain unaware of the wonders inside. In their ranks lies all the humans, and uninitiated Metanthropes. They are the unawakened, oblivious to Metapowers and those who wield them.

But for those who hold a ticket, the **Audience**, the doors open to a reality far larger than they could ever imagine. These are the Metanthropes and other Metapowered entities who observe the rules, lore, and intricate harmonies of the cosmic symphony.

PHONY

Then there are the performers - the **Instruments**. Metanthropes and other Metapowered beings who take center stage, capable of influencing the rhythm and tone of the symphony. Among them are the Protagonists, the shining stars of the opera's recitatives and arias.

Above them stands the **Concertmaster**, the most powerful Metanthrope of a Timeline, wielding Omnipowered abilities and serving as a keystone for one of the great Factions. They shape the tempo of their entire universe.

Beyond the performers rise the **Conductors**, incomprehensibly powerful beings who oversee multiple Timelines. These guides scan the Multiverse, influencing events and recruiting new Metanthropes to expand the orchestra of existence.

Those who have tasked the mighty Conductors with their quest are the enigmatic **Orchestrators**. They are the composers of the symphony, which reverberates across the Multiverse in unending harmonies. Their agendas and identities remain mysteries most will never uncover.

So, tell me, Metanthrope: are you merely a member of the Audience, content to observe? Or will you step into the spotlight, take up your role as an Instrument, and play your part in this grand cosmic symphony?

Destiny awaits!

MULTIVERSAL FACTIONS

As Coalitions grow in strength and influence, multiple Coalitions can unite to form a Faction. Factions are forged by shared doctrines, visions, common goals, ideals, or under the guidance of a unified leadership, possibly a Conductor. These Factions may operate across multiple locations, spanning the planet, exoplanets, and other Dimensions. With their collective power, Factions can reshape the world, even rivaling the might of any Omnipowered entity. Collaboration and communication between Factions have the potential to shape the Metapowered status quo in profound ways.

The exact number and nature of the Factions within the Multiverse remain elusive. Countless minor factions rise and fall across Timelines, making it nearly impossible to define them all. However, four major Factions are widely known, each leaving a definitive mark on the cosmic stage.

The **Technocrates** are explorers of the future, driven to uncover Timelines far ahead of their own where cosmic phenomena and technological marvels can be found. Operating primarily within the wondrous Aether Dimension, they seek out universes rich with extraordinary cosmic events and pursue groundbreaking scientific and technological discoveries. However, through their extensive exploration, the Technocrates have witnessed firsthand the havoc that unchecked Metapowered individuals can unleash. This has forged their belief that such powers must be carefully studied, and even regulated if needed be, to safeguard the stability of the Multiverse.

The **Sumerian Kings** are an ancient cadre of immortal beings who have subtly guided the course of human civilization across countless Timelines. Operating primarily within the mysterious Nether Dimension, they maintain "pinned" locations across space and time where they assemble and safeguard analog records of tales, histories, and secrets gathered from myriads of Timelines. These repositories serve not only as vaults of ancient wisdom but also as strategic headquarters from which the Sumerian Kings continue to weave their silent influence over the unfolding narrative of existence.

The **Collectiva** envisions the unification of Metanthropes and humans across all Timelines. Operating often from the ethereal Astral Dimension, they harness psychic energies to bridge the gap between diverse beings, striving for a singular, collective existence. As master social engineers, the Collectiva uses their abilities to subtly bend and reshape the social structures of human societies. Their influence extends deep into inter-Faction politics, where they maneuver strategically to create alliances, always working toward their vision of universal cohesion.

Lastly, there exists a more enigmatic Faction - the **Autonomia**. They are an assembly of Metanthropes dedicated to guiding those lost or overwhelmed by the vastness of the Multiverse. Rooted in the ideals of individuality, freedom, and self-expression, Autonomia members are not issued direct missions to other Timelines, but instead, they focus on helping each Metanthrope uncover

and embrace their unique role within the grand cosmic symphony. **Autonomia** believes that the answers the Factions endlessly seek may not be found in conquest or manipulation but within the limitless potential of each individual.

Within the realm of Factions united by the cause of Metanthropes' welfare, diverse approaches and perspectives emerge. However, as influences from extradimensional and extraterrestrial realms intertwine, conflicts arise, driven by differing ideologies and aspirations. This vibrant ecosystem of Factions creates a delicate balance between unity and dissonance, shaping the future of Metanthrope society across the Timelines.

MULTIVERSAL THREATS

Amid the multifaceted realms of politics, philosophy, and power dynamics, beneath conflicts and competing ideologies lies a shared, unspoken truth: the Factions exist and persist because they have glimpsed forces far beyond their comprehension. These entities, unfathomably vast in number with influence across a multitude of Timelines, pose a threat that eclipses all internal struggles. Some wield power that not only rivals but far exceeds even the most powerful Concertmasters of the symphony.

These entities, shrouded in impenetrable mystery, manipulate the threads of every reality, assimilating any Timeline they come across. Their origins and motivations remain veiled, their intentions utterly inscrutable to even the most enlightened minds. It is this looming existential threat that compels even the most divided Factions to recognize the necessity of safeguarding Metanthrope welfare and, despite their differences, to consider the need for a united front against what lies out there.

MYTHOS

And then, there is the fable of the elusive Prime Timeline - the whispered origin of all things. A theoretical construct, perhaps, one that, when inquired upon, offers only fragments. Yet, within those shattered pieces, you may still glimpse shards of the grand cosmic truth.

For what is the search for the Prime Timeline if not a yearning to answer the oldest question: where did it all begin? What meaning does existence hold?

They spoke of the cosmic symphony already playing. The Orchestrators, first to awaken, were the first to listen - to feel the cosmic symphony. With their True Soul, they asked a question within themselves: Where does it all begin? Who strikes the first note? And as they sought its source, a grand paradox took shape. For in trying to grasp the Prime Timeline, their consciousness ignited - a spherical nova, radiant and infinite.

From this blinding core, thin, pure-bright rays burst outward, piercing every direction. Each ray - a Timeline - stretching endlessly. Endless possibilities born in that instant. It was then that the Factions splintered - some chasing where the light would lead, others seeking where it begins. And so, the great divide began.

But what lies within the heart of that nova?

Ah, that is another tale. They speak of The Ville - a city outside of space and time. A place where thought becomes substance, where your very emotions weave the fabric of existence. There, ideas bloom into radiant strands of light, birthing Timelines with every fleeting notion. It stands as a testament to Metanthrope ingenuity, hidden yet omnipresent - a sanctuary and final bastion against the unknowable threats that loom between realities.

Perhaps, if you listen closely, in the stillness between worlds, you too may hear it - the distant, rhythmic melody of the cosmic symphony calling you home.

S

SYSTEM

Metanthropes RPG utilizes a d100 system. Each type of action attempted by a Player, or the Narrator, depends on a 100-sided die roll to determine its outcome. Two ten-sided dice are rolled simultaneously, one representing the double digits of the roll, and the other representing the single digits. Players compare the outcome of their rolls with the Stats of their Protagonist (which are always in the form of a % percentage,) to determine whether their roll is a success or a failure. When attempting a d100 roll, you are successful when you have rolled the number of your Stat used, and below. Whenever your result is above your Stat used, then the roll is considered a failure.

HOW A D100 ROLL WORKS

The Narrator asks me to make a roll on the behalf of my Protagonist. My required Stat score is 50% and my dice result was 50. I barely made it, but it was a successful attempt. In case I rolled 51 and above, my result would have been a failure.

Ten-sided dice (single digits only) are rolled to determine other numerical outcomes, such as the Duration of an activated effect, the total Damage inflicted by a source, and others. When a roll of 10 occurs, the 10 counts towards the outcome of the roll; the die is then re-rolled, and the new outcome is added to the total. This process is repeated for each result of 10, any number of times, before the final sum of the roll can be determined. This effect is called the "Splash 10" effect.

HOW A D10 ROLL WORKS

A roll which includes 2d10 (two ten-sided dice) is required, to determine the total number of Targets of an effect. My roll's result was 2 and 10, the Splash 10 Effect commences and the 10 is added to the total and then re-rolled. The second result was another 10, so the process repeats, and the third result was a 3. My total result of that roll was 25 (2 + 10 + 10 + 3).

Whenever any numerical values need to be multiplied or divided, resulting in decimals, the result is always rounded up.

LEVELS OF SUCCESS & FAILURE

Not all success or failures are considered equal. The measure by which a roll succeeds or fails is dictated by its Levels of Success, or Levels of Failure. These are determined by the difference of the number of the Stat (%) used for the roll and the outcome of the roll. Levels of Success or Failure are always calculated in tens, and single digits are ignored. For every 10% the roll outcome is below the Stat used, a Level of Success (✓) is accumulated, and for every 10% the roll outcome is above the Stat used, a Level of Failure (✗) is accumulated.

Additional ✓ result in a more desired outcome, while additional ✗ will lead to unwanted outcomes. A roll result which is below the number of the Stat used, but less than 10% is considered a Success without any Levels of Success (□), while a roll's result which is above the number of the Stat used, but less than 10% is considered a Failure, without any Levels of Failure (⊠).

SIMPLE SUCCESS & SIMPLE FAILURE

My Protagonist attempts a roll with a Stat score of 50%. If my roll's result is anywhere between 49 and 41, it would result to ⊠. If my roll's result is anywhere between 51 and 59, it would result to □.

HOW LEVELS OF SUCCESS ARE ACCUMULATED

My Protagonist attempts a roll with a Stat score of 50%. My roll's result was a 25, therefore I accumulated ✓✓ (50-25 = 25, ignoring the single digits). In case I rolled 20, I would have accumulated ✓✓✓ instead (50-20=30).

HOW LEVELS OF FAILURE ARE ACCUMULATED

My Protagonist attempts a roll with a Stat score of 22%. My roll's result was a 60, therefore I accumulated ✗✗✗ (22-60 = -38, ignoring the single digits). In case I rolled 62, I would have accumulated ✗✗✗ ✗✗ instead (22-62=-40).

Besides dictating the degree of success or failure or a roll, certain numbers of ✓ are required in some activations of Metapowers to unlock further effects, while crossing the threshold of a specific number of X will have fixed results. The Narrator may ask for a specific amount of ✓ for a specific action to commence, while additionally the Narrator may warn a player that reaching a specific number of X, will have as result specific misfortunes happening. The following table outlines how additional ✓ or X may affect in-game the impact of any given roll. Use this table as a reference, but results may vary according to the situation in-game.

LEVELS	OUTCOME EXAMPLES
10 * ✓	A Critical Success!
9 * ✓	An extraordinary effort of legendary caliber
8 * ✓	A remarkable effort of heroic proportions
7 * ✓	Your deed resonates with profound admiration
6 * ✓	Your actions inspire widespread awe
5 * ✓	Your achievement shines brilliantly
4 * ✓	A reliable, unwavering success
3 * ✓	A solid, straightforward success
2 * ✓	A success, though it falls short of your ideal vision
✓	A narrow success, but a success nonetheless
▣	A success, albeit by the narrowest of margins
☒	A brave attempt, yet it falls just short of success
X	An undesired outcome to your attempt
2 * X	An outcome that veers off from what was desired
3 * X	A clear-cut failure
4 * X	A failure that might have unfortunate ripple effects
5 * X	Your failure spirals into greater misfortune
6 * X	A wildly uncontrolled failure with dangerous outcomes
7 * X	A serious blunder causing a series of unfortunate events
8 * X	A calamitous event leading to dire consequences
9 * X	A catastrophic failure with long-lasting repercussions
10 * X	A Critical Failure!

BONUSES & PENALTIES

The Narrator may choose to impose a circumstantial Bonus or Penalty on any roll attempted, befitting the situation under which the action is attempted. A Bonus is applied on a favored roll, while a Penalty on a disfavored roll. Bonuses and Penalties apply to a singular roll, and after the roll is made all Bonuses and Penalties are removed. A Bonus on a roll may range from +10% to +100%, and a Penalty on a roll may range from -10% to -100%. Bonuses above +50% are considered plot devising interventions, while Penalties below -50% are actions which go against all odds, doomed to fail on most occasions.

In the event a roll is affected by more than one Bonus, only the highest Bonus in value is applied, and the rest are ignored. Similarly, in the event a roll is affected by more than one Penalty, only the lowest Penalty in value is applied, and the rest are ignored. However, if a roll is affected by both a Bonus and a Penalty, subtract the latter from the former to determine the circumstantial modifier which will ultimately affect the roll. The following table shows which Bonuses, and which Penalties can be applied to rolls, based on the complexity of the action attempted in the situation the roll is involved in.

ACTION ATTEMPTED	BONUS / PENALTY
Plot Device	+100%
Divine Intervention	+90%
Fated	+80%
Elementary	+70%
Routine	+60%
Rudimentary	+50%
Extremely Easy	+40%
Very Easy	+30%
Easy	+20%
Straightforward	+10%
Normal	0%
Challenging	-10%
Difficult	-20%
Very Difficult	-30%
Extremely Difficult	-40%
Overwhelming	-50%
Irrational	-60%
Forbidden	-70%
Doomed	-80%
Impossible	-90%
Inconceivable	-100%

ROLLING WITH MULTIPLE BONUSES

The Narrator informs me that my attempted roll, due to various circumstances in-game, has a + 40% and a + 10% Bonus. Only the highest Bonus is considered, therefore I consider only the + 40% Bonus.

ROLLING WITH MULTIPLE PENALTIES

The Narrator informs me that my attempted roll, due to various circumstances in-game has a – 20% and a – 30% Penalty. Only the lowest Penalty is considered, therefore I consider only the -30% Penalty.

ROLLING WITH MULTIPLE BONUSES AND PENALTIES

The Narrator informs me that my attempted roll, due to various circumstances in-game, has a + 40% and a + 10% Bonus, while additionally the roll has a – 20% and a – 30% Penalty. Only the highest Bonus and the lowest Penalty are considered, therefore I consider only the + 40% Bonus and the -30% Penalty. Since the roll is affected by both a Bonus and a Penalty, I subtract the Penalty from the Bonus ($40 - 30 = 10$), and therefore the final modifier for that roll is a + 10% Bonus.

DESTINY

In Metanthropes, Destiny (🎲) is a resource which Players can spend to re-roll any roll with an undesirable outcome, even save their Protagonists from dying. Each Protagonist starts the game with a predetermined number of Destiny and is awarded additional Destiny at the beginning of each new Scene, based on their role-play.

A Player may spend any number of Destiny on a dice roll, but only the last outcome is considered valid. Players can spend any amount of Destiny by re-rolling any number of their rolls attempted. A Player may spend one Destiny to re-roll any d100 roll, or any roll that involves any number

of d10 dice. In case of the latter, when multiple d10 dice are involved, with each Destiny spent, all d10 dice are re-rolled, ignoring the previous sum. Players cannot spend their Destiny to force other Characters to re-roll that way. Lastly, Destiny is also rewarded with the special Critical Rolls, the roll outcomes of 001% and 100%. For more information about Critical Success & Critical Failure read the following section.

DESTINY AND D100 ROLLS

I attempted a d100 roll with a Stat score of 75% and the result was 80. Knowing that I can do much better than that, I spend a Destiny and reroll, with the new outcome being 95. Still not satisfied, I kept on pushing my luck, and the following result was 55, accumulating ✓✓✓✓. Satisfied with that outcome, I kept that result, and I withdraw a total of two Destiny (🎲🎲) from my Destiny total.

DESTINY AND D10 ROLLS

I attempted a roll which involves five d10 dice. My results were 1, 3, 6, 5, and 5 for a total of 20. Feeling that I could do better, I spent a Destiny and reroll all of the dice involved, and the new outcome was 2, 2, 6, 4, and 1 for an even worse total of 15 this time. I decided to keep pushing my luck, and my next result was 5, 5, 7, 8, and 5 for a total of 30. Satisfied with that outcome, I kept that result, and I withdraw a total of two Destiny (🎲🎲) from my Destiny total. ($40 - 30 = 10$), and therefore the final modifier for that roll is a + 10% Bonus.

CRITICAL ROLLS

A Critical roll of a 001% (00 and 1) is a Critical Success, and a Critical roll of 100 (00 and 10) is a Critical Failure. Whenever a Character rolls any Critical roll that Character is rewarded with 🎲 (one Destiny), but a Character cannot spend 🎲 to reroll a Critical roll. A Critical Success is always considered a Success, ignoring all Penalties, cir-

cumstances in-game, and the score of the Stat used, and automatically accumulates ten Levels of Success (10 ✓). A Critical Failure is always considered a Failure, ignoring all Bonuses and the score of the Stat used, and automatically accumulates ten Levels of Failure (10 ✕).

A CRITICAL SUCCESS

During a violent prison riot, I decide that my Protagonist will attempt to calm the inmates by devising a clever speech. My roll's outcome is 001, a Critical Success. As a result, my Protagonist's speech proves to be a jaw-dropping motivational speech, that instantly ceases all violent acts and even persuades some inmates to return to their cells on their own accord.

A CRITICAL FAILURE

My Protagonist is the driver during a high-stakes car chase. The Narrator requests a roll to avoid crushing the car. My roll's outcome is 100, a Critical Failure. The Narrator describes that during a daring maneuver, my Protagonist fumbles and the result is catastrophic. The vehicle crashes into a loaded truck, completely wrecking the car and resulting all aboard receiving terrible damage and medical conditions.

If both parties accumulated any number of ✓, if the initiator of the VS roll has accumulated more ✓ than the defending Character, then the action was successful, and the defending party becomes subject to the effect. However, each ✓ accumulated by the defending Character removes one ✓ accumulated by the initiator of the VS roll. If the defending Character's roll instead resulted in a failure (✕), or accumulated any number of ✕, then only the amount of ✓ accumulated by the initiator are considered. In the case of VS rolls which involve multiple Characters as the defending party, then each ✓ accumulated by all defending Characters, remove one ✓ accumulated by the Initiator of the VS roll.

VS ROLL WITH BOTH PARTIES BEING SUCCESSFUL

My Protagonist and an NPC are caught up in a dispute. The Narrator declares that the dispute in-game must be settled with a VS roll between my Protagonist and the NPC. Since I initiated the contested roll, I made my Stat roll first. My roll's result accumulated ✓✓✓✓. Subsequently, the Narrator makes the appropriate Stat roll for the NPC. The Narrator's roll outcome accumulated ✓. As a result, I manage to win the VS roll by accumulating a total of ✓✓✓✓ (one ✓ is removed from my total, due to the NPC's success in the VS roll).

VS ROLL

Often in Metanthropes RPG, actions are performed which involve other Characters who may be unwilling to be subjected to the desired effect, and they are given a chance to defend themselves. The outcome of a contested attempt is calculated by an opposing roll, called a Versus, or VS roll. Each Character involved makes a Stat roll determined by the Narrator (or by the effect's designated Stat used in case of the Activation of a Metapower, Combo, or a Possession). The Stat rolled can be the same, or a different Stat can be used for each of both contesting parties. A Character who initiates the VS roll can do so against one single target, or multiple. The defending party may choose not to make their roll, allowing the initiator to win the VS roll without a struggle.

The Character who initiated the VS roll attempts the roll first and calculates if the result is successful or not (■ or ✕) and if any ✓✓ or ✕ were accumulated. Then the defending Character involved in the VS roll proceeds to calculate the same. If the initiator of the VS roll was successful (■ or with any additional ✓) and the defending party was not (✕ or with any additional ✕), then the action was successful, and the defending party becomes subjected to the effect. Whenever the defending Character is involved in a VS roll, that roll is always considered a Free Roll for that Character and costs no Action slot (read more in Actions).

In case of a tie (an equal amount of ✓ or in case both were successful ■, without accumulating any additional ✓), the roll which is closest to their appropriate Stat wins the contest. In the rare occurrence where both outcomes are equally distant from their respective Stats, it is considered a perfect tie. In that case, both parties involved gain 🌀 (one Destiny) and the VS roll is performed from the beginning.

In case both parties involved in a VS roll want to spend Destiny (🌀) to re-roll their initial rolls, the initiator of the VS rolls always declares and spends any amount of Destiny for consecutive re-rolls, up until they decide to keep their last roll. Afterwards it is the defending Character's turn to spend any amount of Destiny, until they decide to keep their last roll. They do not need to know the result of each other unless the Narrator states otherwise. The VS roll is resolved with the last roll each Character kept after they were done spending their Destiny re-rolls.

ACTION SCENES

A Metanthropes Session consists of Scenes, where Protagonists and NPCs interact through dialogue and individual actions to shape the story. Such Scenes are not turn-based, and Characters can interact in real-time as actors in a play. However, whenever any number of Characters involved in a Scene want to perform opposing or contradicting actions, with different interests and

conflicting purposes, then a turn-based Action Scene commences. During an Action Scene, in-game time comes to a halt, and Character actions become subject to a specific set of rules presented in this section. Always consider an Action Scene as part of the current ongoing Scene.

INITIATIVE

During an Action Scene, Characters act in Turns. The order by which each Character may act is determined by an Initiative roll. Initiative is what sets the play order for all Characters involved in an Action Scene. When the Narrator calls for Initiative, all Characters involved in the Action Scene proceed to make a Reflexes roll. The Character with the most accumulated ✓ will play first, followed by the one with the second most check, up until the Character with the least ✓ has played. Then the Character with the least ✓ will play, followed by the one with the second least X, up until the Character with the most X has played as well. In case of a Critical Success or a Critical Failure, the Character who made the roll is awarded a Destiny as usual during such rolls and accumulates 10 * ✓ in case of a Critical Success or 10 * X in case of a Critical Failure. There is no additional reward or punishment at Critical Rolls during Initiative.

In case multiple Characters enter the Initiative with the same outcome, whoever has the highest Reflexes plays first, followed by the one with the second highest and so on. In case any Characters who have the same Initiative outcome, and both have the exact same number as their Stat which was involved at rolling Initiative: then both Characters receive a Destiny and make an additional Initiative roll to determine who goes first between them. Some Characters who might have Metapowers such as 6th Sense, might roll Initiative with a different Stat, other than Reflexes.

EXAMPLE OF INITIATIVE

Four Characters (A, B, C, D) are involved in an Action Scene, and roll for Initiative. Their results are ✓ for Character A, ✓ ✓ for Character B, and ✗ for both Character C and D. Characters C and D both had the same result, but Character D has a higher Reflexes score. The final order of play is the following: Character B, Character A, Character D, and Character C.

TURN

A Turn begins whenever it is a Character's turn to play during an Action Scene. A Turn's duration in-game is usually a few seconds, unless the Narrator states otherwise. Read below the segment "During my Turn" for more about what can be accomplished during a Turn.

ROUND

When all Characters involved in the Action Scene complete their Turn, a Round is complete. A full Action Scene Round lasts up to thirty seconds, although the in-game time of each Round is largely dependent on the nature of the actions undertaken by the Characters and the situation in-game.

CYCLE

A Cycle consists of two consecutive Rounds within an Action Scene. Following the end of the first Round, all Characters involved in the Action Scene play again, using the same Initiative score. After the second Round is completed, the first Cycle of the Action Scene ends. After each Cycle ends, each Character involved in the Action Scenes proceeds to make a subsequent Reflexes roll to determine the next Cycle's Initiative order. When the next Cycle is over, repeat the process until the Narrator declares the Action Scene is over.

AMBUSH ROUND

In the case that one Character, or a group of Characters, engage in an Action Scene involving a Character or a group of Characters that are completely unaware of, or unalerted to, the initiators of the Action Scene, then an Ambush Round is played. During an Ambush Round, only the initiators and those who are aware of the ambush may roll Reflexes for Initiative. Ambushed Characters do not roll Initiative during this Round but are still able to use their Reaction (read more in Actions).

Once all the Characters in the Initiative have finished their Turn, the Ambush Round ends. Then, a new Initiative roll must be performed by all Characters involved, beginning with the first full Cycle of the Action Scene. An Ambush Round occurs only when at least one Character is unaware and caught by surprise when the Action Scene starts.

DURING MY TURN

During a Turn, a Character can roleplay, perform a Movement (move my Character around, and interact with the environment), and attempt Actions (anything which involves dice rolling). Roleplaying during my Turn during an Action Scene is different from roleplaying during any other Scene; it should not be extensive or highly elaborate, as there is less time to engage in dialogue while performing other actions and moving around. Players are encouraged to allow for minimal “free roleplay” during their Turns, limited to a few lines when it is my Turn, and only a couple outside of my Turn, within the Round. However, in the event I want my Protagonist to engage in more extensive roleplay during my Scene, I can choose to forgo doing Actions, or Movement, or even my whole Turn, at the Narrator’s discretion.

Main Action	Any Type of Action which requires a successful dice roll but also sufficient time and concentration to perform.
Multi-Action	Multiple Main Actions, each made with a – 10% Reduction, for each number of total Multi-Actions attempted.
Extra Action:	A Supportive roll to whichever secondary activity a Character commences during a Turn.
Movement:	Move up to 10 (possibly more) Hexagons on the Grid. You can forgo your Main Action to gain another full Movement.
Reaction	A reactive roll attempted at any time during a Round, in response to any Character’s Actions or Movement
Focused Action	Forgo all other Actions and Movement and focus on doing only one thing.
Wait	Forgo playing a Turn and play later during the Initiative.

WAIT

In the case that a Character is not ready to play their Turn right away, but they do not want to lose their involvement in the Round, they can choose to Wait. By doing so, they temporarily forgo performing Actions and Movement, and the next Character in the Initiative order plays. After that Character, the Character who has chosen to Wait can declare to the Narrator that they want their Wait to end and join in and play their Turn. When choosing the option of Wait, a Character cannot perform any type of Action (except for their Reaction), nor any Movement, and they are only limited to a few lines of “free roleplay”.

MOVEMENT

Movement during Action Scenes represents the series of movements a Character is going to perform during a Turn. Movement is spent by moving around the area, using items and by interacting with the environment.

A human or a Metanthrope Character have a base Movement score of 10, which allows them to move up to 10 Hexagons on the Grid. Movement is a number which is calculated by a Character’s Speed, Weight, and Size.

A Character’s Movement is equal to the (Speed Modifier) * (Weight Modifier) * (Size Modifier). For more information about Speed, Weight, Size, and their Modifiers, read the following section.

A Character can spend any number of Movement during their Turn and store the rest. Afterwards, they perform any Action slot they wish and afterwards, complete the remaining Movement available.

During a Character’s Turn, a Character can forgo their Main Action slot to gain another (full) Movement. A Character cannot perform an Additional Movement more than once each Turn. A Character cannot perform an Additional Movement as part of a Multi-Action.

In case a Character has received the Condition: Knocked Down, or begins their Turn prone, down on the ground, then the Character may spend 5 of their total Movement to get back up.

Using Items, operating Vehicles, and interacting with the environment requires spending Movement. The Narrator can include, exclude, or modify any of the following numbers according to the situation in-game.

A Character’s Movement is hindered if that Character is found crossing natural landscape, when dealing with obstacles, and if the Character is within an Area affected by Metapowers that create such uneven terrain.

The Condition Wobbly (in addition to reducing the Creativity of a Character) further reduces a Character’s Movement by -1 per level of the Condition.

TERRAIN OR INTERACTION	ADDITIONAL MOVEMENT
High grass, light snow, sand, water (up to ankles)	1 
Push a button, ride a bike, open/close a door	
Jungle grass, corn field, mud, water (up to knees)	2 
Pull a lever, ride and turn on a motorcycle, wear a vest	
Deep snow, rumbles, rocks, stairs, mud (up to knees)	3 
Unlock a door or a lock, wear boots or gloves	
Engulfed by water, spiral stairs, uneven ground, tar	4 
Open a hatch or a vault, wear a suit	
Engulfed by mud, tar, or quicksand	5 
Don an armor, enter and turn on a car, turn a valve	

WEIGHT

Weight represents how heavy or light a Character (or an Object) is. Heavier Characters have low Movement, while lighter Characters have high Movement. Prowess is the Bonus or Penalty applied whenever a Character attempts to engage in physical activity, such as attempting to Push, Pull, or Lift objects or when attempting to Grapple a target.

WEIGHT	MODIFIER	PROWESS	AVERAGE	EXAMPLE
5	5	-50%	0 kg, 0 lb	Cockroach
6	4	-40%	1 kg, 2 lb	Mouse
7	3	-30%	5 kg, 11 lb	Cat
8	2	-20%	20 kg, 44 lb	Dog
9	1,5	-10%	40 kg, 89 lb	Chimpanzee
10	1	0%	65 kg, 144 lb	Human
11	0,8	+10%	160 kg, 353 lb	Gorilla
12	0,6	+20%	500 kg, 1103 lb	Bear
13	0,4	+30%	5000 kg, 11024 lb	Elephant
14	0,2	+40%	20000 kg, 44092 lb	Aircraft
15	0,1	+50%	100000 kg, 220463 lb	Whale

SPEED

Speed represents how fast a Character can move. Speed is the base of a Character's Movement. The field of Movement Modifier is used when calculating the Movement of a Character.

SPEED	MODIFIER	AVERAGE	EXAMPLE
5	1	0 m/s, 0 mph	Snail moving
6	2	0 m/s, 1 mph	Floating
7	4	1 m/s, 3 mph	Crawling
8	6	2 m/s, 5 mph	Walking
9	8	6 m/s, 14 mph	Jogging
10	10	8 m/s, 18 mph	Running
11	20	14 m/s, 32 mph	Bicycle
12	50	35 m/s, 79 mph	Driving
13	100	70 m/s, 157 mph	Helicopter
14	250	250 m/s, 560 mph	Airplane
15	500	2000 m/s, 4474 mph	Fighter Jet

SIZE

Size represents how much space a Character (or an Object) can occupy in an area. Size is the combination of a Character or an Object's height, length, and width. Bigger Characters have increased Movement, while smaller have decreased Movement. Reach is the expanded or shortened Strike range. Strike  is the dice used for a Strike's rolled Damage. Alternative  is any alterations in Life offered by having non-human Size. The field of Observation is used when attempting to locate or attack any target with Size other than Size 10.

SIZE	MODIFIER	REACH	STRIKE 	ALTERNATIVE 	AVERAGE	EXAMPLE
5	0,1	Same Hex	0	-40	1 cm, 0 ft	Ant
6	0,2	Same Hex	1	-30	5 cm, 0.1 ft	Cockroach
7	0,4	Same Hex	2	-20	10 cm, 0.33 ft	Mouse
8	0,6	Same Hex	(1d10/2)	-10	35 cm, 1.1 ft	Cat
9	0,8	Same Hex	1d10	-5	70 cm, 2.3 ft	Dog
10	1	Same Hex	1d10	0	170 cm, 5.6 ft	Human
11	2	Adjacent Hex	2d10	+ 50	240 cm, 7.9 ft	Horse
12	3	Adjacent Hex	3d10	+100	6 m, 20 ft	Elephant
13	9	2 Hexes	4d10	+250	20 m, 65 ft	Whale
14	27	3 Hexes	5d10	+500	76 m, 250 ft	Boeing 747
15	81	9 Hexes	10d10	+1K	828 m, 2717 ft	Burj Khalifa

HOW MOVEMENT IS INFLUENCED BY SPEED, WEIGHT, AND SIZE ALTERATIONS

A Character has received the Buff: Accelerated 2 and Accelerated 1. Only the highest is considered therefore their Speed is 12. Furthermore, the Character has received the Condition: Encumbered 2, (their Weight is 12) and the Buff: Enlarged 2 (their Size is 12). Therefore, that Character's total Movement is $(50 * 0.6 * 3) = 90$.

THE GRID

The Grid is the visual representation of an Action Scene as seen from a top-down view. The Grid is composed of Areas, from the smallest Area: Hexagon [Area 1] Which represents an area of 2 meters (6.5 feet) wide, long, to the biggest Area: Planet [Area 16]. Moving from one Hexagon to any adjacent one costs one Movement. The following table lists all the Areas of Metanthropes, as well as how much Movement is required to fully cross a side, both in a straight line, and in a diagonal line.

AREA	NAME	STRAIGHT	DIAGONAL
[Area 0]	Self	-	-
[Area 1]	Hexagon	1	1
[Area 2]	Room	3	3
[Area 3]	Building	7	9
[Area 4]	Square	21	27
[Area 5]	Block	63	81
[Area 6]	Neighborhood	189	243
[Area 7]	District	567	729
[Area 8]	Town	1,701	2,187
[Area 9]	City	5,103	6,561
[Area 10]	Region	15,309	19,683
[Area 11]	State	45,927	59,049
[Area 12]	Country	137,781	177,147
[Area 13]	Zone	413,343	531,441
[Area 14]	Continent	1,240,029	1,594,323
[Area 15]	Hemisphere	3,729,087	4,782,969
[Area 16]	Planet	11,160,261	14,348,907

ACTIONS

Action in Metanthropes is anything that involves making a d100 roll (and sometimes subsequently d10 rolls as well). During each of my Turns, I have access to three different slots of Actions. A Main Action, an Extra Action, and a Reaction. Whatever a Character mainly attempts during a Turn, spends the Main Action slot. A Character's Extra Action slot can be spent on undemanding, simple tasks. The Reaction slot is reserved as an answer to other Characters' actions. A Reaction is the only type of Action that can be played during another Character's Turn.

Additionally, an activity that requires a Character's absolute focus and additional time to be activated, might turn into a Focused Action. A Focused Action requires spending all Action slots and a Character's Movement in order to commence. The exact time a Focused Action might require completing varies, according to the task at hand, from a Full-Turn to a Cycle, or more.

At the beginning of each new Round, all Characters refresh all their Action slots. Lastly, the Narrator can offer a Character any number of Free Rolls that do not take any of the mentioned slots in order for the Character to perform minor feats not worthy of an Action slot. One such roll is always the defending Character's roll in case of a VS roll. Unless specifically stated, the Narrator has the final say as to which Character's Action should take the Main Action, Extra Action, Focused Action, or Reaction slot, or if they should take no slot at all and be offered a Free Roll instead.

MAIN ACTION

A Main Action can be any type of action which requires a successful dice roll, but also sufficient time and concentration to perform. A Main Action requires some concentration, but not the entire focus of a Character, enabling them to move and potentially do additional things while still performing the Main Action. Most Stat rolls, Meta-powered activations, uses of Possessions, and most types of Attacks require spending the Main Action slot. The Main Action slot can be turned into a Multi-Action, whenever a Character wants to attempt multiple Main Actions during a single Turn by reducing the efficiency of each roll.

MULTI-ACTION

Characters may choose to split their Main Action into multiple Main Actions, called a Multi-Action. A Character can perform the same Main Action multiple times or attempt different Main Actions with a successful Multi-Action. Only a Main Action slot can be turned into Multi-Action, not any other type of Action slot.

Whenever a Character is attempting a Multi-Action, apply a – 10% Reduction on all Main Action rolls attempted by that Character this Turn, for each number of total Main Actions attempted. There is no limit to the number of additional Main Actions a Character can include as part of a Multi-Action, but in the event any of the Stat rolls involved drops below 1% due to the Multi-Action reduction, then that Character cannot perform that Multi-Action.

HOW MULTI-ACTION REDUCTIONS FUNCTION

Attempting two Main Actions as part of a Multi-Action, will impose a by – 20% Reduction to both rolls. Attempting a Multi-Action with three Main Actions will impose a – 30% Reduction to all three rolls. Attempting a Multi-Action with four Main Actions will impose a – 40% Reduction on all four rolls, and so on.

The reduction imposed by the Multi-Action is not considered a Penalty. Attempting a Multi-Action while having a Penalty on any of the rolls attempted, will cause the total reduction of the roll to stack, and additionally reduce the Character's chance of success.

HOW PENALTIES AND REDUCTION FROM MULTI-ACTION STACK

A Character attempts a Multi-Action which includes two Main Actions and the second of those rolls has a – 20% Penalty, then that Character will attempt the two rolls, the first with a – 20% Reduction and the other with a total – 40% reduction (- 20% due to Multi-Action and another – 20% due to the Penalty).

A Character attempting a Multi-Action must state the total number of Main Actions to be included in the Multi-Action before attempting any of the rolls. A Character cannot add or remove any number of Main Actions after they have attempted the first. A Character must only state the total number of Actions, allowing them to change, or repeat the same Main Actions in case of failing any of them. A Character can choose to forgo attempting any of the number of Main Actions declared to be attempted and choose different Targets from those originally intended. In the event a Character wants to spend Destiny (☐) to re-roll any of the rolls involved in a Multi-Action, they can do so for each roll individually.

EXTRA ACTION

An Extra Action is a supportive roll to whichever secondary activity a Character wishes to commence during a Turn. The Extra Action slot allows the Character to perform activities that do not require much concentration or attention. The Extra Action can be attempted before or after a Character has attempted their Main Action during a Turn.

Additionally, a Character can always spend their Extra Action to deactivate any previously activated Metapower effect with ongoing Duration. A Character can also use the Extra Action slot to willingly reduce any number of ✓ from a d100 roll they make or remove any number of d10 dice results from a d10 Roll, in the event a Character wants to deliberately mitigate the efficiency of the effort. In order to do so, a Character can spend their Extra Action before attempting any other Action that the Character wishes to mitigate the efficiency preemptively. Alternatively, it can be done so after the other Action has been attempted, before its result takes place, provided that the Character has the Extra Action slot available.

REACTION

The Reaction slot is the only type of Action that can be attempted outside of a Character's Turn in the Initiative order. Characters can spend their Reaction at any time during a Round in response to any Character's Actions or Movement. The Reaction can take place before or after the Action of the other Character concludes or at any time during their Movement. A Character can spend their Reaction in response to their Action or Movement attempted by the same Character.

In the event multiple Characters want to perform their Reaction during another Character's Turn, then the Character with the best Initiative score attempts their Reaction first, followed by the one who has the second best, and so on. A Character cannot attempt a Reaction which requires spending any other Action slot, unless stated otherwise by the attempted roll's description or by the Narrator.

A Character can spend their Reaction to Evade incoming Strikes from other Characters who have entered

their space and threaten them with close-range attacks. During perilous situations, a Character can spend their Reaction, dive for cover, or get in front of another adjacent Character to save them from an upcoming danger.

FOCUSED ACTION

Attempting an Action which requires extra attention, full concentration, or additional time to be activated, requires performing a Focused Action. Focused Actions have activations which require an entire Turn, or possibly even more in-game time. Attempting a Focused Action requires a Character to forgo their Movement, their Main Action, and Extra Action slots, and even their Reaction slot, throughout the entire time the Focused Action is activated. In case a Character has already spent their Reaction during this Round, they cannot commit to a Focused Action. In case a Character spends their Reaction while in the middle of performing a Focused Action, then the Focused Action is canceled.

Focused Action activation time varies from a Full-Turn, a Cycle (in which case you will lose your Movement, Extra Action, and Reaction twice) or more. The Focused Action's result commences at the end of the Focused Action's activation, and only in the event the Character attempting has not attempted any other Action or Movement during that time. A Character can decide to stop their attempt at Focused Action, losing their progress in return, in the event they decide to attempt any other Actions instead (such as spend Reaction while performing a Focused Action).

FREE ACTION

Free Actions are additional rolls deemed unfit to take any Action slots during a Turn. With the Narrator's approval, Free Actions can be attempted even out of turn. There is no limit to how many Free Actions a Character can attempt during a Round, but the Narrator ultimately decides which rolls can be categorized as Free Actions.

ROLLS

There are three Characteristics in Metanthropes: Body, Mind and Soul. Each of them has three sub-categories called Stats. Only the Stats are being rolled, while the Characteristics serve as a base of the % score.

The **Stats of the Body** are Endurance, Power and Reflexes.

The **Stats of the Mind** are Creativity, Manipulation and Perception.

The **Stats of the Soul** are Awareness, Consciousness and Willpower.

A Characteristic or a Stat cannot drop below 0%. A Character with 0% at a Characteristic cannot attempt any Stat rolls with any Stats associated with that Characteristic and all activated, and all activated effects generated by that Character, by the Characteristic that is 0% immediately end their Duration.

A Character with 0% at a Stat cannot attempt any rolls which involve that Stat, and all activated effects generated by that Character, by the Stat that is 0%, immediately end their Duration. In addition to the above side-effects, having a Characteristic or Stat at 0% inflicts further side-effects described below.

BODY

Body is the Characteristic which defines a Character's constitution, physical prowess, and physique.

A Character with 0% Body: cannot move, spend any of their Movement, or activate any effects which require Movement as their Activation slot.

ENDURANCE

Endurance determines a Character's stamina, health, and vigor.

Endurance is used when attempting to: Holding your breath, prevent or mitigate the effects of Fatigue, Hunger, Pain, Disease, narcotics, poisons, alcohol and more.

A Character with 0% Endurance: Whenever damaged, the source of Damage all initial roll outcomes turns to 10 unless they are a 10 - in which case the "Splash 10" effect takes place.

RECEIVING DAMAGE WITH 0% ENDURANCE

A Character with 0% Endurance is being Damaged 2d10 + 5 Damage. The roll outcomes are 3 and 10. The 3 turns to 10, and the 10 counts towards the outcome of the roll; the die is then re-rolled, and the new outcome now 6. The total Damage received is 5 (base) + 10 + 10 + 6 = 31.

POWER

Power determines a Character's strength, striking effectiveness, and physical explosiveness.

Power is used when attempting to effectively Strike, determine the Damage from unarmed, and Melee Weapon Strikes, climb, jump, bend or break objects, push, pull, lift, or throw and more. A Character with 0% Power: Drops everything held, cannot carry anything, if they are wearing any Armor - they cannot move in the Grid.

A Character may attempt a Power roll by spending their Extra Action or Main Action to push, pull, lift, or toss any target. The amount of ✓ accumulated, determines the

total number of the Weight of the target that can be handled this way, as seen in the following table. The Push/Pull filter includes how many  Hexagons can move per ✓ accumulated, with targets with Weight below 10 applying a Bonus to the roll. The Lift filter includes how many ✓ are required in order to lift and carry the target, with targets with Weight below 10 applying a Bonus to the roll. The Toss filter includes how many  Hexagons you can hurl a target with each ✓ accumulated, for targets of Weight 10 and below, and how many ✓ accumulated are required to Toss targets of Weight above 10.

WEIGHT	LIFT	TOSS	PUSH/PULL
5	+50% ✓	✓ =  *5	+50% ✓ =  *5
6	+40% ✓	✓ =  *4	+40% ✓ =  *4
7	+30% ✓	✓ =  *3	+30% ✓ =  *3
8	+20% ✓	✓ =  *2	+20% ✓ =  *2
9	+10% ✓	 = 	+10% ✓ = 
10	✓	3 * ✓ = 	✓ = 
11	3 * ✓	5 * ✓ = 	3 * ✓ = 
12	5 * ✓	7 * ✓ = 	5 * ✓ = 
13	7 * ✓	9 * ✓ = 	7 * ✓ = 
14	9 * ✓	11 * ✓ = 	9 * ✓ = 
15	11 * ✓	13 * ✓ = 	11 * ✓ = 

ATTEMPTING TO PUSH

My Protagonist attempts to push a container with Weight 13, and I manage to accumulate , a valiant effort, but the container will not move.

ATTEMPTING TO LIFT

My Protagonist attempts to lift a small log with Weight 9, my roll will gain a +10% Bonus due to its smaller Size and I manage to accumulate , therefore I lift the log with ease.

ATTEMPTING TO TOSS

My Protagonist attempts to toss an object with Weight 6 as far as I can. After an unfavored roll I accumulate only . Even though it is enough to toss that object four Hexagons away.

REFLEXES

Reflexes determines a Character's agility, motor skills and balance.

Reflexes are used when attempting to roll for Initiative, Evade Strikes, throw Projectile Weapons, mitigating Falling Damage, stealth, tumble, balance, use sleight of hand, legerdemain, or acrobatics, ride animals, run faster and more.

A Character with 0% Reflexes: cannot attempt any Reactions.

MIND

Mind is the Characteristic which defines a Character's brainpower, problem solving and innovative thoughts.

A Character with 0% Mind: cannot attempt any Main Actions or Focused Actions during their Turns.

CREATIVITY

Creativity determines a Character's imagination, expression, and handiwork.

Creativity is used when attempting to repair, craft, modify or forge an object, designing a blueprint, model, or a plan, writing an essay, thesis, or a theorem, expressing yourself through dance, drawing, sculpture, figuring out how devices work, solving puzzles, playing games, patching up wounds and more.

A Character with 0% Creativity: cannot attempt any Extra Actions or Multi-Actions.

MANIPULATION

Manipulation determines a Character's persuasiveness, charisma, and social engineering skills.

Manipulation is used when attempting to perform a public speech, teach via lecture, engage in argumentative dialogue, negotiate with diplomacy, persuade, interrogate, seduce, barter and more.

A Character with 0% Manipulation: cannot communicate in any way.

PERCEPTION

Perception determines a Character's observatory, evaluative and calculative capabilities.

Perception is used when attempting to search the environment, spot someone hiding, use a Firearm Weapon, operate a vehicle, find a solution to a problem, apply mathematical or scientific knowledge, when writing code or hacking, diagnosing a system or a patient and more.

A Character with 0% Perception: cannot use any type of Possession or interact with any kind of object.

SOUL

Soul is the Characteristic which defines a Character's conviction, spiritual prowess, and mettle.

A Character with 0% Soul: cannot roleplay and their Turns are being controlled by the Narrator.

AWARENESS

Awareness determines a Character's empathy, intuition, and instinctual responses.

Awareness is used when attempting to sense the motives of others, determine if someone is lying, sense something supernatural, listen to your instincts, determine if something is real or an illusion, defend against persuasion, seduction, or barter and more.

A Character with 0% Awareness: believes everything they are told.

CONSCIOUSNESS

Consciousness determines a Character's recollection, subconscious processing, and sanity.

Consciousness is used when attempting to recollect a memory, engage in inner dialogue, morality justification, self-psychological evaluation, interpreting dreams, visions, or omens, showing faith, or repentance, determining if something is real or a fiction of your imagination and more.

A Character with 0% Consciousness: loses access to all Perks.

WILLPOWER

Willpower determines a Character's courage, discipline, and confidence.

Willpower is used when attempting to defend against intimidation, brainwashing, or psyche-infiltration effects, maintaining self-control and inner calmness, mediating, displaying determination and conviction, exuding an aura of resolve and reliance, not showing fear, being brave and more.

A Character with 0% Willpower: Runs away or cowers in fear.

ACTION IN-GAME EXAMPLES	STAT ROLL	ACTION SLOT
Sense someone's motives	Awareness	Main Action
Determine first impression	Awareness	Extra Action
Detect if someone just lied	Awareness	Reaction
Analyze a person's personality profile	Awareness	Focused Action
Prove your point during an argument	Manipulation	Main Action
Offer an alternative to the discussion	Manipulation	Extra Action
Compliment someone while they talk	Manipulation	Reaction
Recite a well-practiced speech	Manipulation	Focused Action
Search the surrounding area	Perception	Main Action
Briefly scan the environment	Perception	Extra Action
Check out something passing by	Perception	Reaction
Thoroughly scan the entire area	Perception	Focused Action
Climb a house	Power	Main Action
Jump from one balcony to another	Power	Extra Action
Dive away from a collapsing platform	Power	Reaction
Climb a long tower	Power	Focused Action

COMBAT

Combat is a part of an Action Scene which includes any kind of attacks, rolling for Damage, loss of Life and any other life-threatening situations. Combat in Metanthropes involves Characters getting hurt, injured, or even dying.

LIFE

Life in Metanthropes represents a Character's overall health, vitality, and will to live. Metanthrope Characters have a Life total of (100 + their Endurance score). Humans have a Life total of (50 + their Endurance score). Other Antagonist type Life totals may vary according to their specifics. Injuries of any kind reduce the total life. Whenever a Character reaches 0 or less Life, that Character dies. The Life of Objects is called Durability.

HEALING

Healing increases a Character's current Life. A Character's Life total cannot be exceeded with excessive Healing. Some Metapowers offer access to direct and effective Healing, although nature works at a much slower rate. To provide proper medical attention, a Character might need a medical kit containing bandages and so on, (depending on the Condition and the trauma) and the Perk: Medicine at a level according to the wound's complexity.

DAMAGE

A Character's Life is reduced by Damage. Damage is calculated by a total number of d10 dice rolled, plus any base number of Damage. There are four Energy Types in Metanthropes: Cosmic, Elemental, Material, and Psychic. Each Energy Type causes its own type of Damage. Damage is caused by any harmful source, from an event like getting punched, to being ravaged by otherworldly forces. Damage caused by Psychic energies is in the form of Psychic Damage and so on.

BUFFS

Bufs are positive effects received from effects such as Metapowers. Bufs are categorized as Bufs that increase the Characteristics or Stats of a Character, and Other Bufs which apply other types of positive effects. Bufs which increase the Characteristics or Stats of a Character are subcategorized into Bufs of the Body, the Mind, and the Soul.

Bufs of the Body include the Bufs: Fortified (Endurance), Empowered (Power), Hastened (Reflexes) and Hardened (Body). Bufs of the Mind include the Bufs: Inspired (Creativity), Articulated (Manipulation), Alerted (Perception) and Sharpened (Mind). Bufs of the Soul include the Bufs: Focused (Awareness), Awakened (Consciousness), Determined (Willpower) and Enlightened (Soul). Bufs increase their respective Characteristic or Stat by + 5% per level. Bufs which increase a Characteristic, as a result increase all Stats tied to that Characteristic. A

Character's Stat can be increased both by the Buf of that Stat and of its respective Characteristic.

HOW BUFFS OF THE CHARACTERISTIC AND STAT CAN STACK

A Character with a base score of Manipulation of 35% who is later being applied to the Bufs: Articulated 3 (Manipulation + 15%) and Sharpened 3 (Mind +15%) will have a total Manipulation score of (35% +15% +15%) = 65%.

Multiple Bufs of the same name do not stack, and only the one with the highest numerical value is considered, the rest are ignored. Receiving the same Buf again simply refreshes the effect's Duration.

HOW MULTIPLE BUFFS WHICH INCREASE THE SAME STAT DO NOT STACK

A Character has received the Bufs: Empowered 2 (Power + 10%) Empowered 5 (Power +25%) and Empowered 1 (Power +5%). Only the highest Buf is considered, therefore that Character is affected only by the Buf: Empowered 5.

Other Bufs include the categories: Cover, Detection, Environment, Enhance Movement, Immunity, and Resistance. Bufs which have no numerical value but rather are followed by a specific subcategory can stack with each other, even if they have the same name. One exception to this rule is the category of Buf: Shift. Only one Shift (the one with the highest level) can be active simultaneously. How multiple Bufs with different names can stack A Character can be affected by the following Bufs simultaneously: Immunity (Slowed), Immunity (Skin Injury), Detection (Invisibility), and Detection (Darkness).

[Complete list of Bufs](#)

CONDITIONS

Conditions, short for medical conditions, are negative effects received from injuries and trauma, physical or otherwise, inflicted by Metapowers, Combos, Possessions, or any type of attacks. Conditions are categorized as Conditions that decrease the Characteristics or Stats of a Character, and Other Conditions which apply other types of negative effects. Conditions which decrease the Characteristics and Stats are sub-categorized into Conditions of the Body, the Mind, the Soul.

Conditions of the Body include the Conditions: Bone Injury (Endurance), Muscle Injury (Power), Skin Injury (Reflexes), Burned (Body). Conditions of the Body further include Asphyxiation, Bleeding, Diseased and Maimed, which are going to be described below. Conditions of the Mind include the Conditions: Wobbly (Creativity), Confused (Manipulation), Disoriented (Perception), Disconnected (Mind). Conditions of the Mind include Pain, Fatigue, Hunger, and Sense Lost, which are going to be described below. Conditions of the Soul include the Conditions: Bewildered (Awareness), Demented (Consciousness), Terrorized (Willpower), Tormented (Soul). Conditions of the Soul further include Amnesia, Probed, Infiltrated, and Unconscious, which are going to be described below.

Conditions decrease their respective Characteristic or Stat by - 5% per level. Multiple Conditions of the same name do not stack, and only the one with the highest numerical value is considered. Other than that, Conditions follow the exact same rules as mentioned above in Buffs.

Other Conditions include categories based on the Characteristic they affect. Other Conditions of the Body include Asphyxiation, Bleeding, Diseased, and Maimed. Other Conditions of the Mind include Fatigue, Hunger, Pain, and Sense Lost. Other Conditions of the Soul include Amnesia, Probed, Infiltrated, and Unconscious.

[Complete list of Conditions](#)

DAMAGE EXAMPLES	ENERGY TYPE	DAMAGE	CONDITIONS
Knife	Material	2d10 + 14 + Power	Based on the ✓ of the attack
Beretta 9mm Pistol	Material	4d10 + 40	Based on the ✓ of the attack
Fire	Elemental	3d10 + 33	Burned 3, Pain 1
Poisonous Gas	Elemental	2d10 + 10	Diseased 2
Pushing Gravity	Cosmic	2d10 + 20	Wobbly 3
Gamma Radiation	Cosmic	3d10 + 45	Diseased 3, Skin Injury 3
Hemicrania	Psychic	1d10 + 5	Disconnected 2
Suffocating	Psychic	4d10 + 40	Asphyxiation 1

ATTACKS

Attacks in Metanthropes are categorized into Strikes, and attacks with Melee or Ranged Weapons. Attacks apply Damage and Conditions according to their type. An attack can be made by Aiming or landing on a random location at the target. If the attack is not done with Aiming, then the Narrator rolls a Random d100 roll to determine where the attack lands on the target's body. Rolling for a random location is a Random roll and offers no Destiny at any Critical roll outcomes.

D100 ROLL	LOCATION
100% -> 96%	Head
95% -> 81%	Upper Torso
80% -> 71%	Lower Torso
70% -> 56%	Right Arm
55% -> 41%	Left Arm
40% -> 21%	Right Leg
20% -> 1%	Left Leg

AIMING

Aiming in Metanthropes refers to attacks or effects which are targeting a particular location on a body or an object. Each location has its own roll Reduction, as seen in the following table. An aimed attack must be declared as such before the roll is made. Aiming offers a Reduction to a roll, which is not considered a Penalty, and therefore stacks with any additional Reductions from Multi-Actions and with Penalties.

LOCATION TARGETED	ROLL REDUCTION
Head	-25%
Upper Torso	-15%
Lower Torso	-20%
Any Arm	-15%
Any Leg	-10%
Any Specific	-30%

Complex attack with Aiming, Multi-Action, and Penalty A Character attempts to Attack another Character while under the effect of a - 20% Penalty. The Character declares that wants to attempt a Multi-Action of two Attacks, with the second one Aiming at the target's head. The first attack will be attempted with a total of -40% (-20% Penalty, and -20% Reduction due to Multi-Action). The second attack will be attempted with a total of - 65% (-20% Penalty, -20% Reduction due to Multi-Action, and a further - 25% Reduction due to Aiming at the head).

STRIKE

Strike in Metanthropes represents a Character's physical attack made with bare hands, legs, knees, elbows, headbutts or via a Melee Weapon. The Strike's unarmed Damage is of the Material Energy Type, and it deals 1d10 + the Character's Power Score. A Strike requires spending the Main Action slot and is attempted with a Power roll. Since the Strike takes the slot of the Main Action, it can be turned into a Multi-Action. Strikes turned Multi-Action; in-game translate into a choreography and combination of attacks. A Strike turned into Multi-Action has the Damage of each successfully delivered Strike reduced by the amount of the Multi-Action's reduction.

In addition to the Strike's Damage, according to the accumulated ✓ of the attack, successful Strikes also apply Conditions to their target. More accumulated ✓ translate in-game into Strikes delivered with accuracy and precision and therefore apply more threatening Conditions.

UNARMED STRIKE	CONDITIONS APPLIED
☐	No Conditions
✓	☞ 1 = Skin Injury 1
2 * ✓	☞ 1, ☞ 1 = Muscle Injury 1
3 * ✓	☞ 2, ☞ 1
4 * ✓	☞ 2, ☞ 2, ☞ 1 = Bone Injury 1
5 * ✓	☞ 3, ☞ 2, ☞ 1, ☞ 1 = Bleeding 1
6 * ✓	☞ 3, ☞ 3, ☞ 2, ☞ 1, ☞ 1 = Pain 1
7 * ✓	☞ 4, ☞ 3, ☞ 2, ☞ 2, ☞ 1
8 * ✓	☞ 4, ☞ 4, ☞ 3, ☞ 2, ☞ 2, ☞ 1 = Maimed 1
9 * ✓	☞ 5, ☞ 4, ☞ 3, ☞ 3, ☞ 2, ☞ 1
10 * ✓	☞ 5, ☞ 5, ☞ 4, ☞ 3, ☞ 3, ☞ 2
11 * ✓	☞ 5, ☞ 5, ☞ 4, ☞ 4, ☞ 3, ☞ 2

16 * ✓	☞ 5, ☞ 5, ☞ 5, ☞ 5, ☞ 5, ☞ 5, ☞ 5

EVAD E

Evade is the answer all Characters have against Strikes of any kind. Only Strikes can be evaded, not any type of attack from Projectile, or Firearm Weapons. Evade costs spending the Reaction slot and attempting a Reflexes roll. One Evade Reaction may offer protection against multiple assailants. In case the evading Character is successful with their Evade attempt, then one ✓ is removed from each of every attacker's Strikes against the evading Character attempted this Round. In case any attacker was successful (■) without accumulating any ✓, then the attacks are also successfully evaded. For every additional ✓ is accumulated by the evading Character, an additional ✓ is removed from all the attackers' Strikes against the evading Character attempted this Round.

EVAD E AGAINST MULTIPLE STRIKES EXAMPLE

An attacking Character attempts a Multi-Action with three total attacks against a defending Character. The defending Character attempts an Evade and accumulates ✓ ✓. The three Strikes of the attacking Character accumulate the following results: ✓ ✓ for the first Strike, ■ for the second, and ✓ ✓ ✓ for the third. The defending Character's Evade makes the first two Strikes miss completely, while removes ✓ ✓ ✓ from the attacker's third Strike. As a result, the attacker manages to hit the defending Character only once, accumulating a single ✓.

Evade against multiple attackers example

EVAD E AGAINST MULTIPLE ATTACKERS EXAMPLE

An attacking Character attempts a single Strike against a defending Character. The defending Character attempts an Evade and accumulates ✓. The attacker accumulates the following result: ✓ ✓. As a result, the attack is fully evaded. Later than Round another attacker attempts a single Strike against the same defending Character, and the attacker accumulates ■. Since the result of the initial Evade remains the same for the entire Round, this attack is also fully evaded.

GRAPPLING

Grapple attempts are Strikes which, if successful, have the result of immobilizing the target, instead of dealing Damage. A Character who is under the effect of a Grapple receives the Condition: Immobilized and cannot perform any Movement. A Character must declare their intent to attempt a Grapple before making any rolls. To perform a successful Grapple, a Character must attempt a Power roll and spend their Main Action slot while being within Range, similarly to any Strike. This roll can be part of a Multi-Action, and it can be evaded by the target. If the Grapple is successful, both parties proceed into making a Free Roll (does not spend any further Action slot) which is a Pow-

er (of the initiator) VS the Power or the Reflexes (of the target), chosen between them by the target. In case the second Power roll is successful, the target cannot spend any of their Movement during their Turn.

At the beginning of each of the Turns of a Character being grappled, that Character may now use their Extra Action slot to attempt to escape the grapple. Then they proceed on attempting a Power or Reflexes roll (chosen by the grappled Character) VS a Power roll of the initiator of the Grapple. In case the grappled target is successful at this roll, the target escapes the grapple.

SPECIFIC STRIKES

Specific Strikes may have different outcomes in addition, or instead of Damaging the target, such as disarming, tripping, fainting, pushing and more. In addition, Specific Strikes include complex grappling techniques such as body locks and other similar techniques. A Character must declare their intent to attempt a Specific Strike, and specify which one, before making any rolls. Although a Character is free to attempt Specific Strikes without being proficient with them by having the Perk: Athletics at the appropriate level, it will trigger a Reduction, depending on the technique attempted.

MELEE WEAPONS

Melee Weapons in Metanthropes refer to any weapons used in hand-to-hand combat, such as swords, spears, etc. Using Melee Weapons is considered a Strike, and it can be subjected to Evade, similarly to any other Strike. Melee Weapons increase the Damage dealt in comparison to an attack made unarmed. The Melee Weapon Strike Damage equal to (the Weapon base + dice Damage) + the Character's Power score. Although a Character is free to attempt to use Melee Weapons without having the appropriate Perk to use them, untrained attackers receive a Penalty according to the type of Melee Weapon used.

RANGED WEAPONS

Attacks made with Weapons from a distance are called Ranged Weapon attacks. Ranged Weapons are categorized into Projectile, and Firearm Weapons. Using Projectile, or Firearm Weapons without the appropriate Perk: Weapon level will result in rolling with a Penalty according to the complexity of the Projectile Weapon used. Projectiles thrown (like a rock) require a Power Roll while projectiles hurled (like a bow) require a Reflexes roll. Their Range is determined based on how far a Character can throw an object. They deal Damage equal to the Weapon's Damage plus half your Power Stat (always rounded up). Firearms require a Perception Roll and deal Damage according to the Weapon's Damage.

DAMAGE EXAMPLES	ENERGY TYPE	DAMAGE	CONDITIONS
Knife	Material	2d10 + 14 + Power	Based on the ✓ of the attack
Beretta 9mm Pistol	Material	4d10 + 40	Based on the ✓ of the attack
Fire	Elemental	3d10 + 33	Burned 3, Pain 1
Poisonous Gas	Elemental	2d10 + 10	Diseased 2
Pushing Gravity	Cosmic	2d10 + 20	Wobbly 3
Gamma Radiation	Cosmic	3d10 + 45	Diseased 3, Skin Injury 3
Hemicrania	Psychic	1d10 + 5	Disconnected 2
Suffocating	Psychic	4d10 + 40	Asphyxiation 1

world where anything is possible, returning from death is rare but not impossible, a feat achievable only through a select few high-level Metapowers. This mortality mechanic compels seasoned Protagonists to carefully consider which ambitions they will forge into their Destiny, knowing that every pursuit could be their last - or their greatest triumph.

Weapon Conditions

DEATH

Whenever a Character's Life reaches 0 or below, that Character dies. When a Character dies, all active effects, and active Durations of Metapowers have previously activated, or were activated to them, end.

In case a Protagonist dies, the Player owning the Protagonist can choose to spend an amount of Destiny (☹), to save them from dying. The amount of Destiny is equal to the number of Sessions played with that Protagonist. Doing so will return the Protagonist to 1 Life instead of dying. In case the Player does not have enough Destiny, or chooses not to spend them, the Protagonist dies. A Player can choose to spend multiple Destiny this way in case their Protagonist is about to die multiple times within a Round, for as long as they have the appropriate amount of Destiny to spend.

In case a Player who's Protagonist died during a Saga, that Player may choose to keep all the remaining Destiny (☹) that Protagonist had and transfer them to their next Protagonist. Otherwise, the Player may roll for the standard 2d10 + 8 Destiny received when creating a new Protagonist or any other amount given by the Narrator.

Death in Metanthropes is the transference of the soul to the Dimension of Nether, while the body lies deceased on the Material Dimension. In a setting where everything is possible, returning one way or another from the dead is not unheard of, but that feat is reserved only at a couple of Metapowers at high levels. This death mechanic causes Protagonists who have been around enough to be very thoughtful on which of their goals they shall force it to become their Destiny to achieve.

Death in Metanthropes is not an end but a transition - the soul crossing into the Dimension of Nether, while the body remains lifeless in the Material Dimension. In a

S

This segment includes all information that is relevant to a Protagonist to and Character development. A Player can create a new Protagonist by following the six following steps.

Step 1 [Destiny]: Make a $2d10 + 8$ roll and gain that many Destiny rerolls.

Step 2 [Prime Metapower]: Choose any of the 100 Metapowers available to become your Protagonist's Prime Metapower and unlock the first level of that Metapower.

Step 3 [Characteristics & Stats]: Hierarchize your Protagonist's Characteristics of Body, Mind, and Soul and roll for Stats corresponding to each of the Characteristics.

Step 4 [Roleplay]: Select your Protagonist's Background, Metamorphosis, Arc and Regression.

Step 5 [Progression]: Unlock two (or possibly more, depending on the story) starting Perks. Gain 1000 Experience (or possibly more, depending on the story) to store or spend to progress Characteristics, Stats, the Prime Metapower, starting Perks, or unlock new Perks and new Metapowers.

Step 6 [Summary]: Select your Protagonist's Name, Gender, Age, Date of Birth, and Place of Birth. Form your Protagonist's personality traits, imagine the appearance and looks. Discuss with your Narrator your Protagonist's starting Possessions, current location and status within their world and the story.

ROLLING STATS

When creating a new Protagonist, a Player must rank between the three Characteristics (Body, Mind, Soul) a first, a second and a third pick. The first Characteristic pick receives a base of 30%, the second pick receives a base of 20%, and the third pick receives a base of 10%.

Afterwards, for the first Characteristic pick, a Player must rank between the three Stats of that Characteristic a first, a second and a third pick. The first Stat pick will receive a score of: $30\% + 3d10$, the second Stat pick will receive a score of: $30\% + 2d10$, and the third Stat pick will receive a score of: $30\% + 1d10$.

For the second Characteristic pick, a Player must rank between the three Stats of that Characteristic a first, a second, and a third pick. The first Stat pick will receive a score of: $20\% + 3d10$, the second Stat pick will receive a score of: $20\% + 2d10$, and the third Stat pick will receive a score of: $20\% + 1d10$.

For the third Characteristic pick, a Player must rank between the three Stats of that Characteristic a first, a second, and a third pick. The first Stat pick will receive a score of: $10\% + 3d10$, the second Stat pick will receive a score of: $10\% + 2d10$, and the third Stat pick will receive a score of: $10\% + 1d10$.

Destiny can be spent to reroll any unwanted dice roll, and the Splash 10 effect can be utilized for all rolls.

NEW PROTAGONIST CREATION PROCESS

A Player creates a new Protagonist, and for their Characteristics chooses Mind as their first pick (30% base), Body as the second (20% base), and Soul as their third pick (10% base). Afterwards, for the Characteristic: Mind chooses Creativity as the first pick ($30\% + 3d10$). The roll outcomes are 4 and 6, so the Protagonists' total Creativity score is $30+10=40\%$. The Player continues this way with: Perception as the second ($30\% + 2d10$), and Manipulation of the third pick ($30\% + 1d10$). For the Characteristic: Body chooses Endurance as the first pick ($20\% + 3d10$), Reflexes as the second ($20\% + 2d10$), and Power of the third pick ($20\% + 1d10$). For the Characteristic: Soul chooses Willpower as the first pick ($10\% + 3d10$), Consciousness as the second ($10\% + 2d10$), and Awareness of the third pick ($10\% + 1d10$).

FINALIZING

For the final step of a new Protagonist creation process, a Player must include the finishing touches to their Protagonist, such as personal information, their appearance, and their personality. This summary includes the Metanthrope's name (and alias), age, gender, place of birth, date of birth, family status, personality traits, quirks, likes and dislikes, ideologies, ambitions, fears, goal, regrets, looks, style, affiliations, friends, lovers, enemies, and anything else that a Player would like to add to their Protagonist's depth.

Players must discuss with their Narrator what their Metanthrope's personal story is all about. Players are suggested to roleplay something they feel comfortable with but also excite their imagination. Players can research different cultures, histories, accents, customs, ethnicities, and traditions to add flavor to their Protagonist's roleplay. The Protagonist's appearance, clothing, and gear should reflect the kind of story the Metanthrope is going to be involved in.

Lastly, set the Protagonist's Movement, Speed, Weight and Size to 10 and set their Resistances to 0, unless a Metapower they have unlocked offers a Buff which Permanently alters any of the above. Add any other Permanent Buffs that might be gained by your Protagonist's Metapowers, such as Detections, Immunities etc. Set the Protagonist's Life to $100 +$ their Endurance. Include any Fields of Study to any Perks: Knowledge, and the specifics of any Perk: Expertise the Character might have. Include their spoken languages. Add any Possessions the Narrator may offer at the start of the story. A new Metanthrope is ready to be roleplayed.

ROLEPLAY

The combination of Background, Metamorphosis, Arc, and Regression influence heavily the roleplay of a Character. These features can be selected from premade archetypes, they can be randomly generated, or they can be unique and customized by players.

BACKGROUND

A Character's Background is who or what that Character used to be prior to becoming a Metanthrope. A Background can be a word, phrase or sentence that describes their pre-Metanthrope existence. It could be a job description, a title earned, an occupation, a Character's greatest skill or attribute, or anything else that is descriptive enough for that Character. A Character might bring remnants of their Background to their roleplay, cast it into the past or even continue a human life as a Metanthrope all the same. Even the greatest of Metanthropes still might have humble beginnings.

METAMORPHOSIS

The Metamorphosis is a pivotal moment that defines how, when, why, and under what circumstances your Protagonist crosses the threshold from being a human to becoming a Metanthrope. It is a transformative event that shapes their identity. The Metamorphosis of a Metanthrope can take various forms - a single profound event, an ongoing process, a latent power that has existed since childhood, or a recent experience just before the beginning of the Saga.

This Metamorphosis bestows upon your Protagonist their first Metapower, known as the Prime Metapower. The catalyst for a Metanthrope's Metamorphosis can be a driving force that motivates and defines their personality, or it could be a haunting memory from their past that they try to bury. Each Metanthrope's Metamorphosis is unique, and even those who share the same category of Metamorphosis can experience it and be influenced by it in vastly different ways.

Below, you will find ten different options for Metamorphosis. Consider these as suggestive ideas to build the foundation of your Protagonist's journey, rather than rigid guidelines for your roleplay. Drawing inspiration from the structure and concepts presented in the following options, Players can also collaborate with the Narrator to create their own unique Metamorphosis.

NO.1	METAMORPHOSIS	PRIME METAPOWERS EXAMPLE
1	Cosmic Connection	Inner Dimensions
2	Dark Pact	Negate Metapowers
3	Elemental Connection	Zoopathy
4	Freak Accident	Electrokinesis
5	Material Connection	Invisibility
6	Meta Bloodline	Immortality
7	Psychic Connection	Memory Manipulation
8	Scientific Experiment	Quantum Projection
9	Selective Evolution	Meta Vision
10	Self-Made	Meta Ingenuity

[Metamorphosis options detailed](#)

ARC

Arc represents the fundamental concept, behavioral patterns, goals, daily agenda, and core beliefs of a Metanthrope. It defines how your Protagonist acts in various situations, establishes their hierarchies during conflicts, determines the ideologies they support in dialogues, and guides their use of Metapowers to achieve their objectives. The Arc embodies the archetype your Protagonist represents.

Successfully roleplaying your Protagonist's Arc in each Scene will earn you Destiny, based on in-game circumstances and your level of engagement. By roleplaying your Arc, you fulfill your Protagonist's destiny and follow the path they are meant to tread. Players have the freedom to change their Protagonist's Arc at the end of each Act of a Saga if their current Arc no longer aligns with their Metanthrope. This change symbolizes growth, development, and maturity in the Metanthrope's journey.

Below, you will find ten sample Arc options. It's important to note that two Metanthropes with the same Arc can subscribe to opposing ideologies yet approach problems in similar ways and employ similar methods. Lastly, guidelines on earning Destiny through roleplaying each Arc are provided. Players may choose any of the ten Arc options presented or collaborate with the Narrator to create their own, drawing inspiration from and following the structure of the options below.

NO.1	ARC	ROLEPLAY GUIDELINE TO EARN DESTINY
1	Architect	🔮 Gain Destiny whenever you contribute new theoretical or practical solutions to established problems.
2	Autocrat	🔮 Gain Destiny when your leadership proves beneficial, and when your decision-making is proven to be the best course of action.
3	Catalyst	🔮 Gain Destiny whenever you inspire others and initiate change in the environment or people's lives.
4	Harmonizer	🔮 Gain Destiny when you mediate conflicts, forge alliances, and promote understanding among different factions.
5	Herald	🔮 Gain Destiny when you convince others of your visions, studies, or encounters.
6	Investigator	🔮 Gain Destiny when you solve mysteries, puzzles, riddles, learn secrets, or uncover conspiracies.
7	Naturalist	🔮 Gain Destiny whenever you champion the preservation of pristine wilderness, safeguard life-forms, and restore the environment.
8	Predator	🔮 Gain Destiny whenever you embrace your inner savage and showcase your superiority your peers.
9	Protector	🔮 Gain Destiny when you successfully prevent harm from befalling to those you are meant to protect, especially in dire situations.
10	Wayfarer	🔮 Gain Destiny whenever you discover new landscapes, cultures, civilizations, and encounter entities native to these unexplored realms.

[Arc options detailed](#)

REGRESSION

Regression is a fundamental aspect of a Metanthrope's existence, representing their connection to their human origins. It encompasses the reversion to human behaviors, quirks, and attachments that persist despite their ascension. Regressions can manifest as unique knacks, idiosyncrasies, nostalgic attachments, or self-imposed restrictions. It is important to recognize that Regression is not considered a weakness, as it can be a source of strength, adding depth, drama, complexity, and inner conflict to a Metanthrope's roleplay. Every Metanthrope possesses a Regression, whether they openly embrace it, keep it hidden, or are unaware of its existence.

Roleplaying your Protagonist's Regression during each Scene allows you to fulfill their destiny and stay true to their path. By embodying their Regression, you gain Destiny based on your involvement and the circumstances in-game. As a Player, you have the freedom to change your Protagonist's Regression at the end of each Act of a Saga if you feel it no longer represents their evolving identity. This symbolizes their growth, development, and

maturity as a Metanthrope.

Below, you will find ten sample Regression options. It's important to note that two Metanthropes with the same Regression can vastly vary when it comes to their behavioral patterns. Additionally, guidelines for earning Destiny through roleplaying each Regression are provided. While Players can choose from the ten pre-defined Regression options, they are also encouraged to collaborate with the Narrator to create unique Regressions that align with the structure of the options presented below.

NO.1	REGRESSION	ROLEPLAY GUIDELINE TO EARN DESTINY
1	Anachronism	🔮 Gain Destiny whenever you seamlessly blend elements from different eras into your daily life.
2	Artisan	🔮 Gain Destiny when you express themselves artistically, even in perilous times when others may overlook the importance of such pursuits.
3	Beloveds	🔮 Gain Destiny whenever you can include your Beloveds in your everyday life and show your appreciation for them.
4	Consensus	🔮 Gain Destiny whenever you showcase the proper image for all Metanthropes worldwide through your opinions and your actions.
5	Disbelief	🔮 Gain Destiny whenever you manage to reasonably convince yourself that you are not a Metanthrope, even when you activate Metapowers.
6	Heritage	🔮 Gain Destiny when you make decisions that honor or align with your family's legacy or ancestral traditions.
7	Materialism	🔮 Gain Destiny whenever you obtain material wealth you could never obtain as a human
8	Overenthusiasm	🔮 Gain Destiny whenever you express your Overenthusiasm, at inappropriate, or perilous times.
9	Persona	🔮 Gain Destiny whenever you achieve maintaining your identity as a secret while getting involved in the Coalition's activities as your Persona.
10	Suppressed	🔮 Gain Destiny whenever you manage to survive and get by without using your Metapowers while remaining a useful member of your Coalition.

[Regression options detailed](#)

PERKS

Perks in Metanthropes represent a Character's background training, professions, developed talents and practices. Perks give access to specific techniques, information, fields of study, and technical know-how in order to use certain Possessions. Furthermore, Perks offers additional depth and development to a Protagonist, which differs from their Metapowered arsenal.

Perks are categorized into Knowledge and Skills. Knowledge refers to abilities developed through studying theories, learning thesis and theorems, and performing simulations and experiments. Skills refer to abilities that develop through practical appliance, repetition and practicing them in the field.

KNOWLEDGE

Each level of a Perk: Knowledge, offers the Character unlocking or progressing it into a field of study. A field of study is a specialization the Character has within the greater field of Knowledge. Using some Possessions or making certain computations in-game requires having a specific knowledge level. Characters attempting to use an Item, or a technique without having attained the required Knowledge level, cannot attempt that roll.

How Knowledge requirement functions I want my Protagonist to estimate the trajectory of a space rocket entering the atmosphere. The Narrator informs me that my Protagonist requires having the Knowledge: Engineering with a selected field of study at rocket propulsion, and the Knowledge: Science with astrophysics as a selected field of study. Additionally, the Narrator decides that both Knowledges need to be at level 4 or higher to make the appropriate correct calculations and correctly estimate the rocket's projection.

KNOWLEDGE	BRIEF DESCRIPTION
Academics	Academics offers access to educational, cultural, social, and historical fields of knowledge.
Engineering	Engineering offers access to architecture and design capabilities as well as craftsmanship.
Lore	Lore offers knowledge of the unseen Meta-powered world that is shrouded in mystery.
Medicine	Medicine offers the ability to diagnose and treat medical conditions.
Science	Science unlocks mathematical, scientific, and technological fields of study.

SKILLS

Each level of any Skill offers a Character access to new techniques, and the know-how needed to use specific Gadgets, Weapons or Vehicles without Penalties. A Character attempting a roll which requires a Skill at a certain level, without the required Skill level may still attempt a roll, but a -10% Reduction is applied for each missing levels of Skills required. The Reduction imposed by lack of Skill is not considered a Penalty. Attempting an Action which a Skill prerequisite while having a Penalty on any of the rolls attempted, will cause the Reductions and the Penalty of the roll to stack, and additionally reduce the Character's chance of success.

HOW LACK OF SKILL LEVEL APPLIES A REDUCTION

I want my Protagonist to attempt a takedown on an assailant, without having any levels at the Skill: Athletics. Since a takedown requires having the Athletics at level 2, I may attempt the takedown technique, but with a - 20% Reduction on my roll.

SKILLS	BRIEF DESCRIPTION
Artistry	Artistry represents the skill of a Character with any form of expression.
Athletics	Athletics represent control over their body and skills such as acrobatics, martial arts, and sports
Expertise	Expertise represents a Character's skill level in a specific activity. Can be selected multiple times.
Operation	Operations allows the use of tools, machinery, and devices as well as drive or pilot any vehicles.
Weapons	With the Weapons Skill, a Character has undergone training of armed combat of any weapon type.

[Perks detailed](#)

EXPERIENCE

This section will elaborate on how Players can accumulate and spend Experience. Experience is a game currency that is given to Players by the Narrator after each Session. Players gain Experience through their roleplay and the actions their Protagonists accomplish in-game. Protagonists start with the starting amount of Experience their Players can spend to develop them. Unless the Narrator states otherwise that amount is 1000 Experience.

AWARDING EXPERIENCE

The amount of Experience awarded to each Player by the Narrator at the beginning of each new Session is based on the performance of the Protagonists and the events their Protagonists experienced during the last Session. The categories on which upon awarding Experience are based are the following: Roleplay, Acting, Goals, Adversity, Discovery, Influence. Those criteria are explained in detail in the segment below. The Experience awarded increases with the passing of each Session played. The specific amount of Experience awarded is ultimately based at the Narrator's discretion.

1) Roleplay: Roleplaying who your Protagonist is. Considering not only a Protagonist's general concept, Background, Metamorphosis, Arc and Regression but also the Character's ideologies, morals, code of conduct, childhood, ambitions, goals, fears, regrets, trauma, dreams, conscious and subconscious decisions and finally the in-game experiences that molded the Protagonist after the beginning of the story.

2) Acting: Embodying your Protagonist. Changing the voice, tone, way of standing, mannerisms, eccentricities, idiosyncrasies, quirks, and any intense and memorable performances. The more distinct the line between in-game and out-of-game the more Experience is awarded.

3) Goals: Setting new goals and striving to succeed them. Laying detailed plans on how to achieve them and working towards achieving them. There are personal goals for each Protagonist, and collective goals all mem-

bers of a Coalition are striving towards. Setting serious goals is important, but ultimately more Experience is awarded when achieving them.

4) Adversity: Confronting and overcoming challenges. Facing and overcoming adversity in form of a Character's phobias or Antagonists and dealing with daring and life-threatening situations. Recklessness without reason, winning or surviving out of pure luck, masochistic and self-destructive behaviors should not be equally rewarded with facing true adversity.

5) Discovery: Exploring new landscapes and ideologies. Discovering more about the Cosmos and the world the Protagonist lives in, meeting new important Characters, encountering the use of new Metapowers, visiting new lands or new Dimensions, meeting new ideologies, learning new lore, disillusioning old lies, unraveling plots and demystifying the veil of the unknown.

6) Influence: Change the world, and the lives of the people who live in it. Influencing the world by changing mindsets of other Characters, overpowering old regimes, altering the reality and worldview of others, bringing down systems and raising new ones, inspiring revolutions, and synthesizing new philosophies, ideologies, and beliefs.

SPENDING EXPERIENCE

Experience can be spent unlocking new Metapowers and Perks, progressing them to higher levels, and to progress Characteristics or Stats. Players can spend this Experience to progress their Protagonists before the first Scene of the new Session begins. Alternatively, Players can choose to store their Experience for later use.

PROGRESSING CHARACTERISTICS

Characters can progress their Characteristics by spending Experience. The cost for progressing a Characteristic is equal to: The Characteristic's base score * 10. Each progression increases the Characteristic by + 5%. A Character can choose to progress the same Characteristic up to five times in total. When progressing Characteristics, a Player is progressing their Protagonists base Characteristic. The base Characteristic is equal to their starting number of that Characteristic, plus any previous progressing by spending Experience. Base Characteristic do not include any increases from any type of Buffs or decreases from any type of Conditions.

PROGRESSING CHARACTERISTICS

My Protagonist's Soul is at 10% and I want to progress it. I must spend $10 * 10 = 100$ Experience. My Soul Characteristic now becomes 15%. I want to progress it one more time, and now the new cost is $15 * 10 = 150$ Experience, and my new score would become 20%.

PROGRESSING STATS

Characters can Progress their Stats by spending Experience. The cost for progressing a Stat is equal to: The Stat's current score * 3. Each progression increases the Stat by + 5%. A Character can choose to progress the same Stat up to five times in total. When progressing Stats, a Player is progressing their Protagonists base Stat. The base Stat is equal to their starting number of that Stat (which includes the base from the Stat's Characteristic), plus any previous advances by spending Experience. Base Stats do not include any increases from any type of Buffs or decreases from any type of Conditions.

PROGRESSING STATS

My Perception is at 35% and I want to progress it. I must spend $35 * 3 = 105$ Experience. My Perception Stat now becomes 40%. I want to increase it one more time and now the new cost is $40 * 3 = 120$ Experience, and my new score would become 45%.

UNLOCKING & PROGRESSING PERKS

Perks range from Level 1 (novice) to Level 5 (master). Characters can unlock new Perks or progress their existing ones by spending Experience. The cost for unlocking new Perks and progressing Perks is 100. Progressing Perks once the story has begun requires in-game training time spent training. Non-newly created Characters, without the aid of Metapowers, cannot learn new skills and knowledge overnight.

UNLOCKING & PROGRESSING PERKS

I want to unlock a new Perk for my newly created Protagonist. The Experience costs for unlocking that Perk are 100. During a downtime, I want to increase that Perk to level 4, doing so requires an additional 300 Experience.

UNLOCKING & PROGRESSING METAPOWERS

The very first Metapower a Metanthrope unlocks is considered the Metanthrope's Prime Metapower. The act of the Metanthrope's Metamorphosis unlocks the first level of the Prime Metapower for free. The Prime Metapower modulates game progression, as a Character cannot obtain any Metapower at a level beyond that of their Prime Metapower.

Each Metapower has a Classification and an Energy Type. There are ten Classifications (Aegis, Controller, Animator, Manipulator, Arbiter, Clairvoyant, Cosmonaut, Kineticist, Hammer and Utilitarian) and four Energy Types (Cosmic, Elemental, Material, Psychic). The experience costs of unlocking and advancing additional Metapowers beyond one's Prime Metapower differ according to the Classification and Energy Type of a Metanthrope's Prime Metapower. Each Classification has two neighboring

and Classification which are Synergizing. Two identical Classifications are also considered Synergizing. All other Classifications are considered non-Synergizing. Meta-power Energy Types can be the Same or Different.

CLASSIFICATION	SYNERGIZING #1	SYNERGIZING #2
Aegis	Hammer	Controller
Animator	Controller	Manipulator
Arbiter	Manipulator	Clairvoyant
Clairvoyant	Arbiter	Cosmonaut
Controller	Aegis	Animator
Cosmonaut	Clairvoyant	Kineticist
Hammer	Kineticist	Aegis
Kineticist	Cosmonaut	Hammer
Manipulator	Animator	Arbiter
Utilitarian	--	--

When unlocking a new Metapower or progressing a current one, the Player must check the Classification and Energy Type of the new Metapower compares to the Prime Metapower's Classification and Energy Type. One exception is the Classification: Utilitarian. This special Classification considers only the Energy Type of other Metapowers and has reduced Experience costs. Summing up all possible combinations between Synergizing and non-Synergizing Classifications and Same or Different Energy Types, six different Experience cost Tiers are created, as seen in the following table.

TIER	CLASSIFICATION	ENERGY
1	Synergizing	Same
2	Synergizing	Different
3	Utilitarian	Same
4	Utilitarian	Different
5	Non-Synergizing	Same
6	Non-Synergizing	Different

Tier 1: New Metapower has Synergizing Classifications and the Same Energy Type.

Tier 2: New Metapower has Synergizing Classifications but the Different Energy Type.

Tier 3: New Metapower is of the Utilitarian Classification, and the Same Energy Type, or the Prime Metapower is Utilitarian Classification, and the new Metapower has the Same Energy Type.

Tier 4: New Metapower is of the Utilitarian Classification, and Different Energy Type, or the Prime Metapower is Utilitarian Classification, and the new Metapower has Different Energy Type.

Tier 5: New Metapower has non-Synergizing Classifications and the Same Energy Type.

Tier 6: New Metapower has non-Synergizing Classifications and Different Energy Type.

FROM LEVEL	TO LEVEL	TIER 1	TIER 2	TIER 3	TIER 4	TIER 5	TIER 6
0	1	1000	1005	1010	1015	1020	1025
1	2	200	210	220	230	240	250
2	3	600	630	660	690	720	750
3	4	1200	1260	1320	1380	1440	1500
4	5	2000	2100	2200	2300	2400	2500

UNLOCKING A NEW TIER 1 METAPOWERS

My Prime Metapower is Meta Strength which has Classification: Hammer and Energy Type: Material. I want to unlock the Metapower: Invulnerability which has Classification: Aegis and Energy Type: Material. Since the Classification is Matching and the Energy Type is the Same, the Tier for unlocking my new Metapower is Tier 1, and the Experience cost is 1000.

PROGRESSING A TIER 6 METAPOWERS

My Prime Metapower is Meta Strength which has Classification: Hammer and Energy Type: Material. I want to advance the Metapower: Telepathy which has Classification: Manipulator and Energy Type: Psychic from level 1 to level 2. Since the Classification is non-Matching and the Energy Type is Different, the Tier for progressing is Tier 6, and the Experience cost is 250.

PROGRESSING A NEW TIER 3 METAPOWERS

My Prime Metapower is Meta Strength which has Classification: Hammer and Energy Type: Material. I want to advance the Metapower: Meta Touch which has Classification: Utilitarian and Energy Type: Material from level 2 to level 3. Since I am advancing a Utilitarian Metapower with the same Energy Type, the Tier for progressing is Tier 3, and the Experience cost is 660.
